The purpose of the device.

The program allows you to carry out the testing process in real time, to monitor the dynamics, to visualize the obtained results, to view the "energy" of the human body, the condition of the spinal cord and the link of its changes with the internal organs, to observe changes in the recovery process.

The program will allow you to work faster and better with a client during the testing. It will allow you to establish the causes of changes in the body and to determine a correction plan; it will enable the selection and control of funds for the restoration of the body, which will make your recommendations more correct and safe for the client. The essence of an electroacupuncture testing is the measurement of electrical conductivity in biologically active points on the hands, feet and head (using contact plates on the feet, hands and head electrodes) related to various zones, organs and systems of the body.

The nature of the pathological processes, their cause-effect relationships, interest of certain organs and systems, forming and maintaining the pathological process can be assessed by quantitative characteristics. At the same time the device allows you to evaluate the reaction of the body upon any kind of impact. (upon supposed and implemented impact) in real time.

The principles are embedded in the device for a segmental testing of the express-test "Bris":

. The segmental testing is a method, which is based on the principle of six quadrant leads by Voll. The method allows diagnosing the 47 segments of the human body through the unique technical solutions (contact plates for the feet, the palmar electrodes and head electrode. Each segment carries information about a specific organ system and a part of the body, as well as the state of the segmental apparatus of the spinal cord and autonomic system. This technique allows you to get information about all organs and systems, their physiological condition and pathological changes in them, to choose the optimum scheme of therapy in record time.

The reducing complex consists of general and selective programs of the bio-resonance passive correction (BRC) with the possibility of an automatic selection of programs. A wide range of BRC programs allows to create the most effective and the most comprehensive scheme of the restoration taking into account the individual characteristics of the client. This is one of the few effective ways to control the state of the body and prevent disease.

. The device is intended for use in the health-care conditions of sanatoriums and counselling centers. It is used by specialists of the beauty salons, by massage therapists, etc. , as well as for independent use of the device by clients at home.

Opportunities of the express-test "Bris"

The device operation principle is aimed at correcting of the homeostasis of the human body.

- a defining of the functional state of organs and systems related to biologically active points and zones (BAP, BAZ);;
 - a defining of the etiological factor (causes).;
 - an individual selection of medicines, biologically active additives, phyto-homeopathic and homotoxicological medicines, etc., the testing of allergens, food, cosmetics, and so on. e., without the introduction of the latter in the body (a phenomenon of long-range)
 - a prescription and a selection of modes of bio-resonance correction, a monitoring the effectiveness of sessions
 - a monitoring the effectiveness of medicines used for the treatment and prevention of diseases;
 - a diagnosis of the aura;
- a monitoring the dynamics of the client's condition.

The method allows

1. To gather information about the functional state of the body and its systems, presenting in visual form the time-dependent graphics functions, coefficients, and estimates in a very short time (about 5 min).
2. To determine the functional status of the organism as a whole and its parts (the main functional systems), which presents functional changes and abnormalities in the process of self-regulation.
3. The monitoring the effectiveness of any therapy.
4. The assessment of dynamic impacts of the measurements during and between therapy sessions.
5. The possibility of creating a database and statistical analysis.
6. Quick and convenient evaluation of the effects of the medicine, or any other object or item (jewelry, clothing, food, etc.).

Indications for use

The testing for prevention of chronic diseases:

Diseases of the peripheral nervous system: radiculitis, plexitis, neuritis, neuralgia, polyneuritis, polyneuropathy, etc.

Neurological manifestations of spinal osteochondrosis: reflex muscular-tonic and neurodystrophic syndromes, compression radicular syndromes.

Diseases of blood circulation organs: neurocirculatory dystonia, arterial Hypo-and hypertension.

Diseases of the respiratory system: rhinitis, tracheitis, bronchitis, pneumonia, bronchoconstriction, asthma.

Diseases of ENT organs: sinusitis (sinusitis, frontal sinusitis, etc.), laryngitis, adenoid vegetations, tonsillitis.

Diseases of the digestive system: functional disorders of the esophagus, stomach, intestines, gall bladder, gastritis, duodenitis, ulcers disease stomach and duodenal ulcers, chronic colitis, pancreatitis, cholecystitis.

Diseases of the genitourinary system: cystitis, algomenoree, adnexitis, prostatitis, benign tumors, etc.

Contraindications for use

- an individual electric current intolerance;
- a patient has an implanted pacemaker;
- pregnancy;
- an acute disorder in cerebral and coronary circulation;
- state of acute mental excitation.

The conducting of the segmental testing using the express-test "Bris"

The procedure of the segmental testing is painless and does not require complicated preparation procedures of a client. However, it is advisable to fulfill a number of requirements that will make the test more informative and reliable.

It is used 3 pairs of electrodes: 2 frontal electrodes, 2 hand electrodes and 2 foot electrodes for segmental testing.

Requirements for a client

1. It is necessary to have a good contact between the skin and the electrode, without increasing or reducing the pressure; if the surface of the skin is irritated (ulcers, open wounds, etc.), do not take measurements.
2. It is prohibited to use gels because it changes the electrolytic properties of the skin.
3. It is necessary to clean the electrodes with a cleaner, better yet to clean them with a soap or an antiseptic.
4. The forehead, hands and feet of the patient should be clean, remove excess sweat, makeup (preferably with clean water).
5. It is desirable for a client not to be hungry at the time of testing. The best time to survey is the first half of the day or 2 hours after taking food. It is not recommended to drink alcohol 2-3 days before the test. The

day before the examination, you cannot drink coffee, hot and spicy meals. Immediately before the examination, you cannot eat chocolate, citrus, bubble gum. Not to take medicines for the day before the survey if it is painless for the client. Those medicines, which are vital for a client and they are taken for a long time, do not substantially affect the diagnosis (excluding hormones). However, find out information before the express-test: what medicine is it, in what dosage is taken and at what time of day is taken by the client. It is necessary to avoid contact with chemically active substances (paints, solvents) before the session of the express-testing. It is advisable not to smoke the day before the session (if it doesn't cause stress to the patient). Women are not advisable to be screened during the menstrual

6. The skin should be clean, healthy without any signs of inflammation and mechanical damage. Do not use therapeutic or cosmetic creams and ointments before the testing. It is necessary to dry wet skin with a napkin and to moisturize dry skin.

7. Clothes should be preferably from natural fabrics, before testing you must take off all jewelries and metal objects. Turn off your phone or remove it to a distance of 2 m.

8. The best time of the survey is the first half of the day when a client and an operator are in good condition. However, you should take into account the individual biorhythms of the patient. Re-examination is preferably carried out at the same time as the initial examination.

Preparations of an operator;

1. The operator must be healthy.

2. The hands must be clean in the time of the session of the electropunctual test (EPT) and after the testing; they must be washed under running water.

3. The operator should not abuse cosmetics or perfumes, it is necessary to remove all metal objects and jewelry before the testing.

4. Clothing should be made from natural fabrics; it should not cause the electrostatic voltage. Turn off your phone or remove it to a distance of 2 m.

5. The operator should standardize the actions.

6. It is desirable for each operator to have own individual set of equipment for testing.

7. There should not be unknown persons in the room.

(except for parents of children)

Requirements for the room:

1. The temperature should be 21-22 gr. in the room. Humidity should be 60-80 %

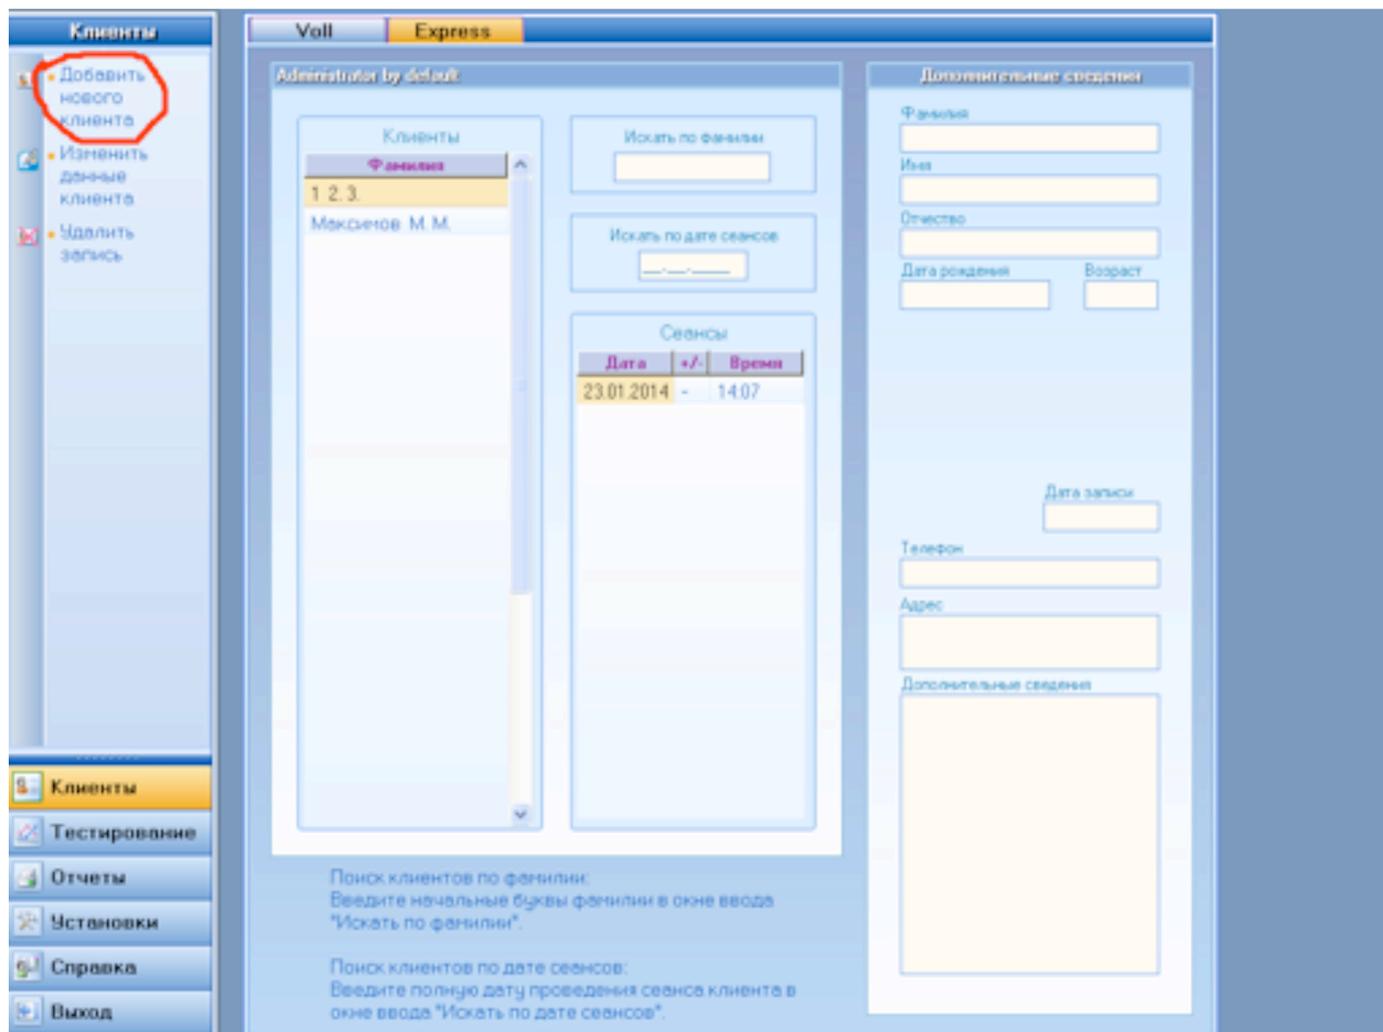

2. There are should not be high voltage power lines and powerful radio and TV aerial near to the room.
3. There should not be any device for physical therapy and x-ray near to the room.
4. The area in which the operator works must not be less than 15-16m.
5. It is prohibited to use the household devices, which are the sources of electromagnetic radiation (ovens, ozone generators, ultraviolet emitters, fridges, TVs).
6. The mobile phones must be removed from the line.
7. The distance between the diagnostic equipment and system unit of computer should be at least 0.5 m, and the distance to patient and the monitor and the system unit 1-1,5 m.
8. The atmosphere in the office should be neutral, not annoying the autonomic nervous system.
9. The coating of the table and floor should not create static electricity.
10. Light sources, especially fluorescent lights should be removed from the equipment at a distance of 1.5 m and not to cause heating of the equipment.

Important guidance. The temperature of the electrodes should become equal with the temperature of the client, before starting the measurement. Therefore, the frontal electrodes must overlap at least three minutes before beginning measurements.

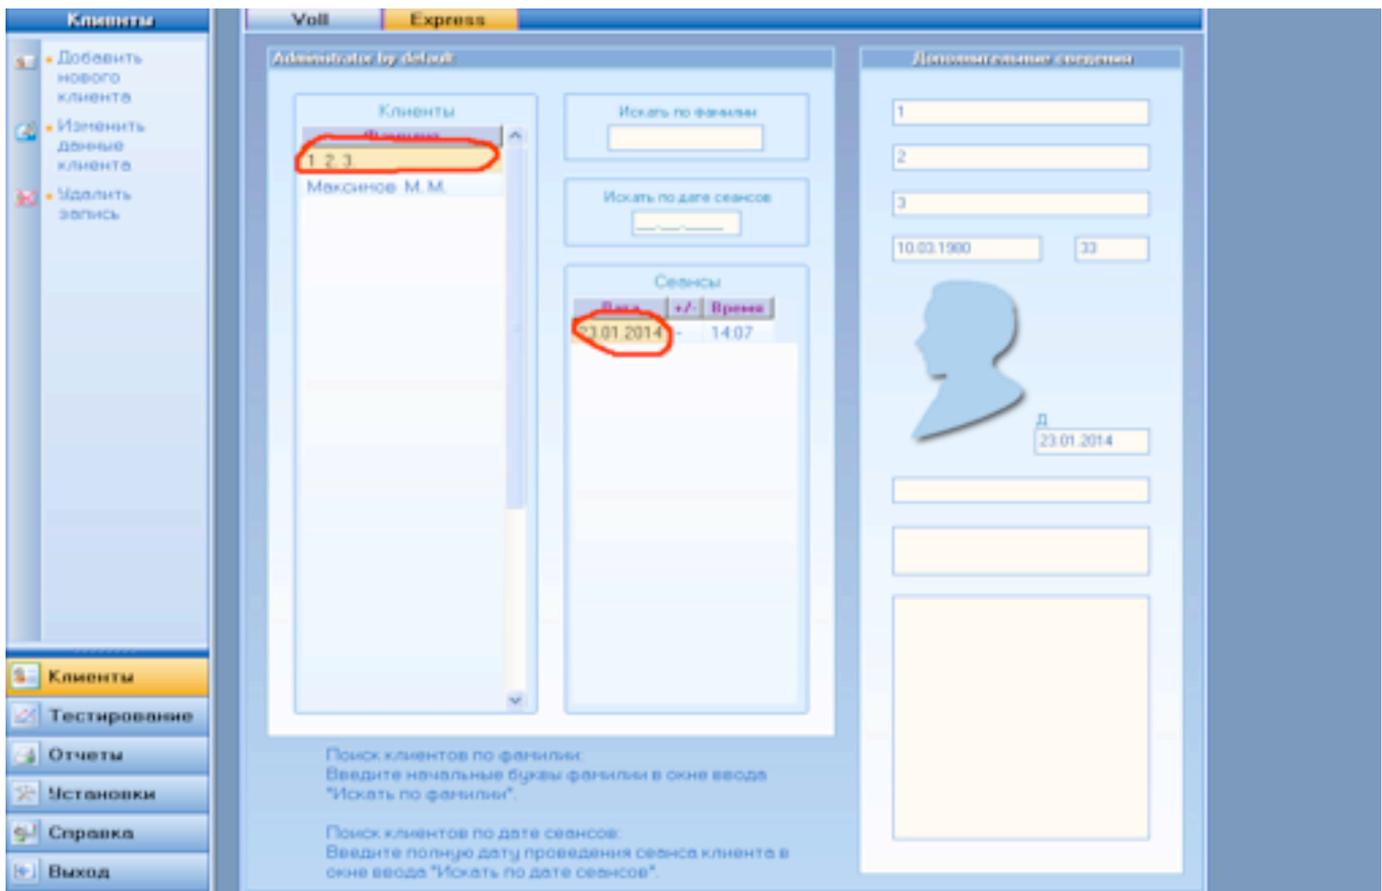

For promoting accurate measurability, it is necessary to consider the time of activity of the meridians (the theory of U –Sin) and to perform the measurements at the same time. (If it is possible). It is desirable to perform the measurements in the morning. In the afternoon, the parasympathetic division of the nervous system begins to dominate, it leads to lower performance. However, at any time of the day, the segmental analysis objectively shows the functional state of the body at the time of the measurement.

The Research Protocol with the method of the segmental express-testing

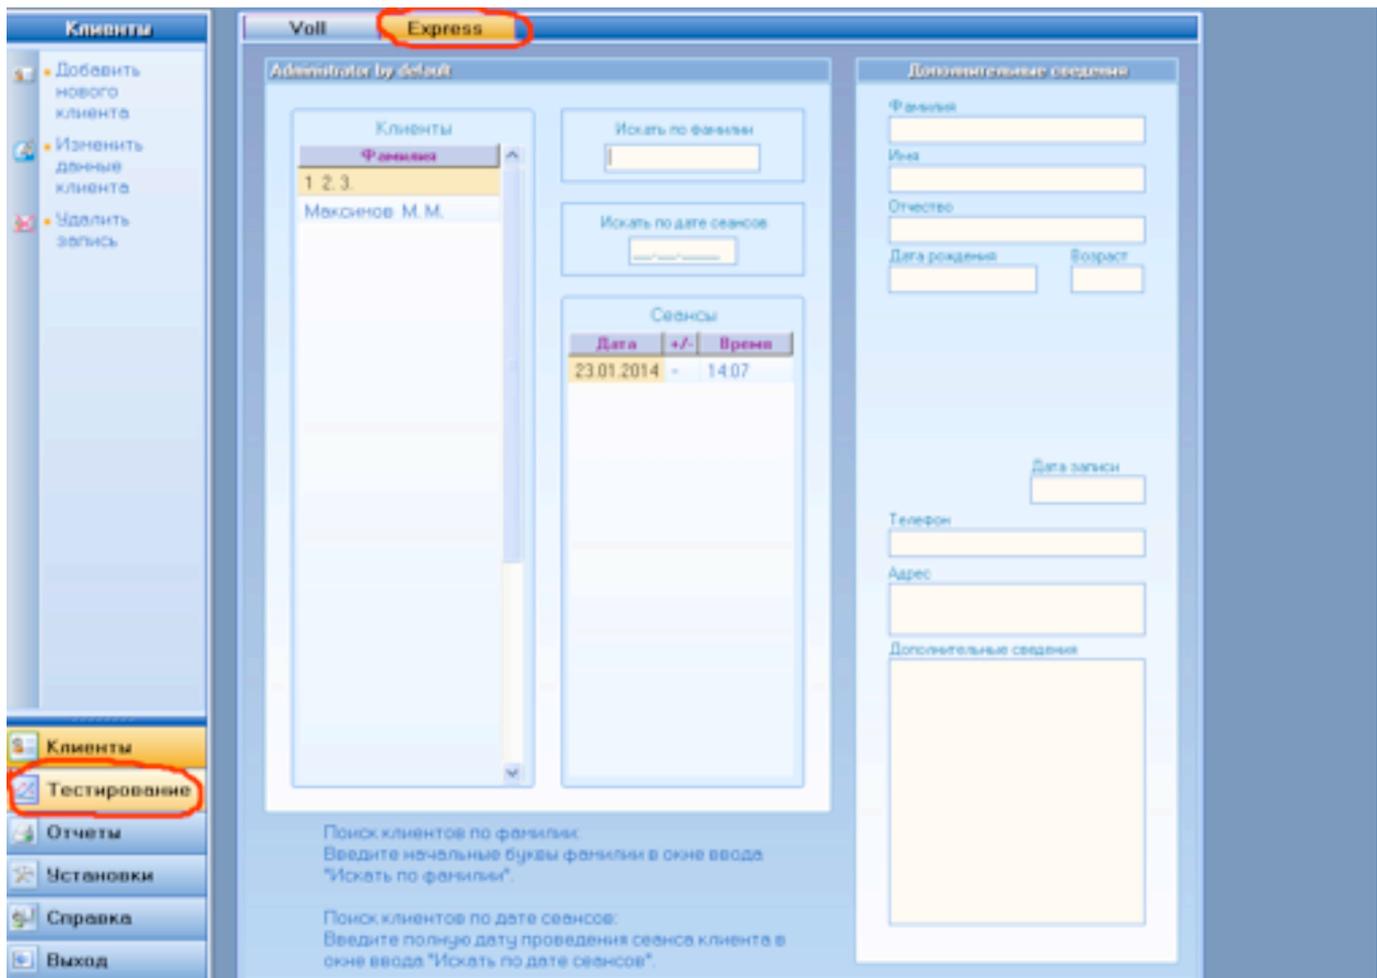

The first step: in the section "The Clients" choose the name of the client or create a card in name of new client. (the function – a new client)

The second step- chose the surname of the client and the date of the testing.

The third step- chose the section "Express " and go to the section «The Testing».

The fourth step - connect the client to the electrodes using the rule - the right side is red colour of electrodes, the left-hand side - is black. It is necessary to remember the rules of preparation of the client, to ensure that the skin is in the contact with the electrodes and it is clear and undamaged.

The fifth step- The preparation of the measurements is carried out in cases when it is necessary, where the patient is in the excited state. This function allows you to remove all possible extraneous influence on the test results. (It takes approximately 5 minutes)

The sixth step- The measurements. The procedure of taking measurements. The client should sit quietly during the whole time of the testing. The contact with the electrodes should be a constant,

The seventh step: The analysis of the results. The function of the program can be implemented in all forms of data visualization.

-**The systems.** They allow an analysis of the functional state of the main body systems. The deviations from the physiological processes towards the decrease of function or hyper-functioning of the system are illustrated by the colors and by the percentage ratio with the corresponding sign. "+" is the hyper-functioning "-" - is the decrease of function

- **Spine.** It allows you to identify the viscerovertebral interaction, to make the segmental analysis of the obtained data. The operator can see the predictive analysis of the dysfunction of this segment, pressing on a particular segment or a vertebra.

-**Chakras.** This section of the program allows analysis of psychosomatic processes at all levels of consciousness, to draw parallels between the visceral and psychological sphere.

The aura or the energy-matrix. This section allows you to visualize all the functioning of the client's problems in a single complex. Clicking on the colored circle, which matches a given graph, the operator receives information about the functional state of the body, the degree and nature of pathological changes in it, the possible clinical syndromes.

The dynamics. This section of the program allows to visualize the state of the main organs and systems in the form of charts and graphs, to make the two sessions of diagnosis, to determine the reactivity of each of the systems.

The eight step

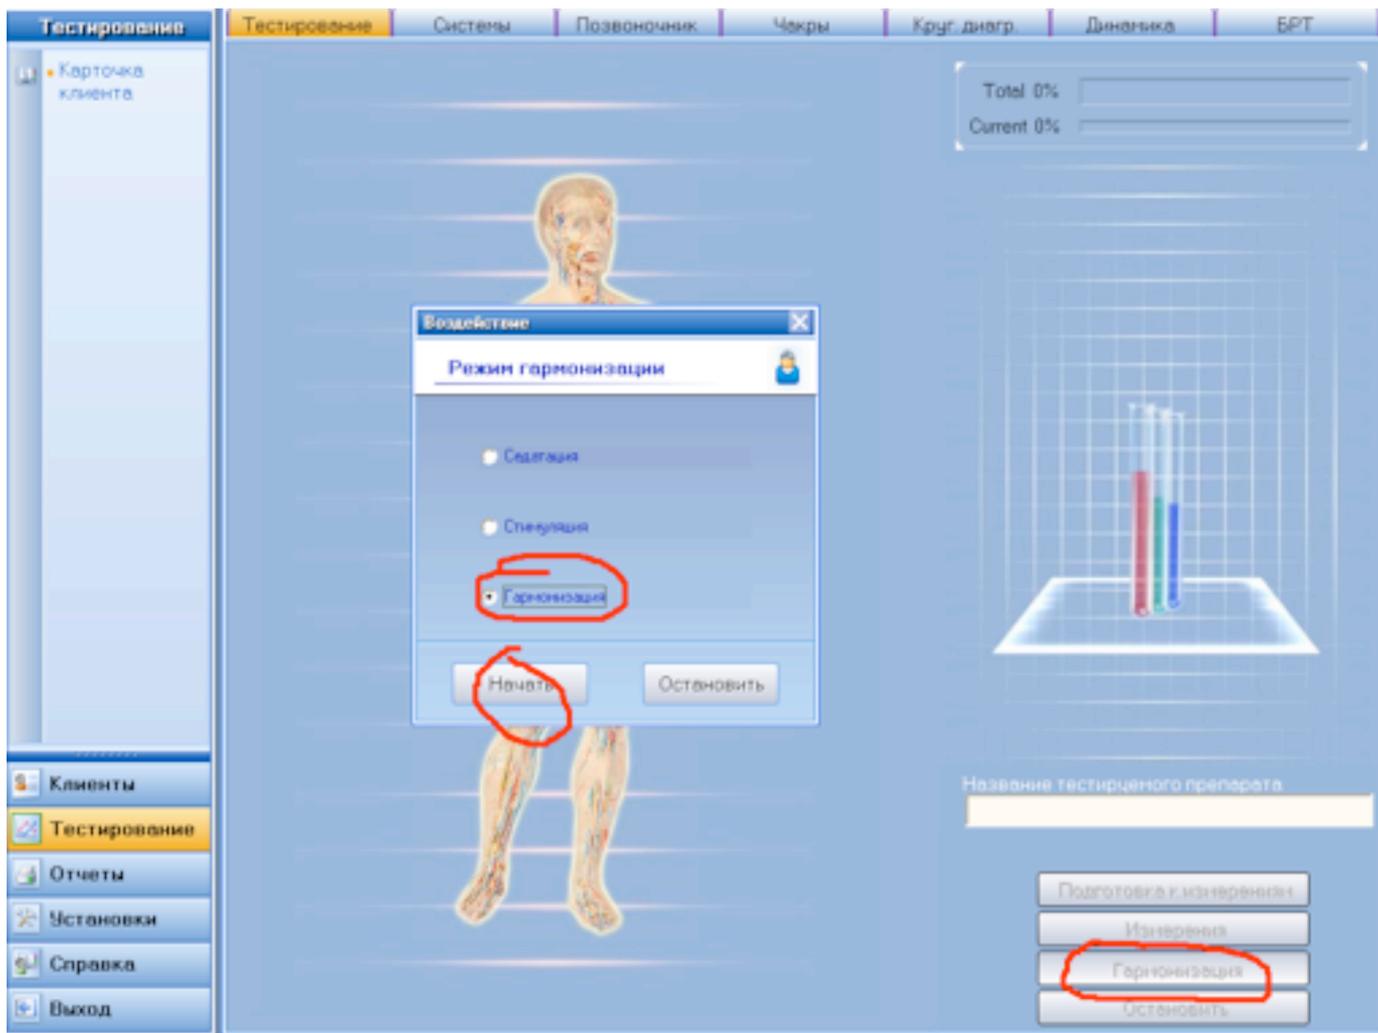

The analysis of functional lability. It is necessary to make correction of the patient's condition using the function of the harmonization or BRT after the analysis of data from the first measurement.

It is necessary to choose the impact in the section "Impacts":

Stimulation - choose this impact when it has a tendency of the hyper-function of the systems, it is the parasympathicotonia (blue segments dominates)

Sedately- choose this impact when it has a tendency of the hyper-function of the sympathetic systems, it is the sympathicotonia (red and orange segments dominates).

Harmonization is used in case of the decrease of function or the hyperfunctioning of the system without general tendencies (the session of harmonization is carried out in 5 -20 minutes, with a possible repeat several sessions in a row to obtain a stable result).

The ninth step

It is recommended to carry out an automatic selection of DBK programs in the section of DBT, using the corresponding function, included in the program or to choose a program according to General recommendations in DRT chapter. The duration of DRT procedure between the first and the second measurements may be within 5 – 10 minutes of the selected program.

The tenth step: The analysis of the obtained results after remeasurement procedures. It is recommended to carry out the process of comparing two measurements in the mode - "dynamics".

In the process of comparing of two measurements you can estimate the lack of dynamics in the relevant segments and the nature of this dynamics.

Options of dynamics:

1) The lack of dynamics in the organ or system is an indicator of chronically proceeding processes with the exhaustion of adaptation reserves.

2) The negative dynamics of indicators shows the sharp reduction in functional activity of an organ or system, the failure of the adaptation mechanisms or the reduction of the reserves of adaptation.

3) The positive dynamics exists- if the indicators go up in the normal range during the second measurement after the workload, (It is a functional norm). If during the second measurement after the workload the indicators go up above normal indexes (It is an indicator of subacute course of the disease with a tendency for exacerbation or the unstable remission of the pathological process. The reserves of adaptation are in norm.)

The eleventh step:

The conduction of the external medical test with the inclusion the preparation from the resonant field in the bio contour. This test in the express- test has its own characteristics.

Two qualitative levels:

-*The positive test* – the body recognizes the frequency or demonstrates a positive dynamics of changes.

-The negative test - the reaction of the body to the frequency is not observed or it is not present.

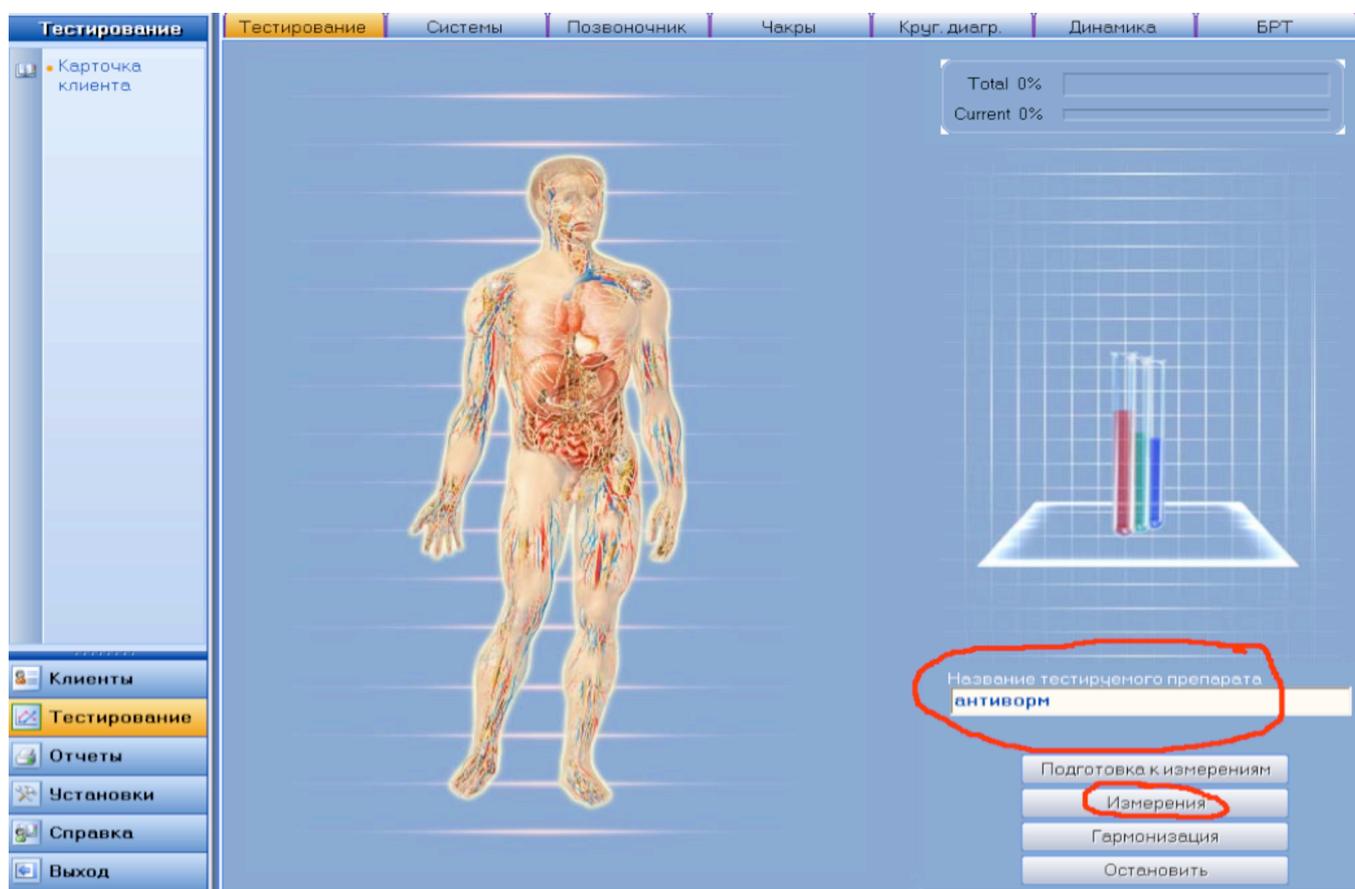

The principle of pharmacological testing is based on repeated measurements with inclusion in the measuring the contour of the investigated frequencies. In segmental testing the method is implemented by connecting the needed medication through a resonator field.

The segments resonate at the time of the measurement , but the analysis is conducted on the segments where were pathological variations according to their degree of importance. At the same time the indicators in the hyper-function corridor should resonate on 10.e. in the direction of the standards and the indicators, which are located in the decrease of function corridor should resonate on at least 4.e. in the direction of the standards. It will be interpreted like a positive test.

The indicators of the segmental testing will not show a positive dynamics if it has not the reaction to the given medication or it is not an impact of the body.(in the standard direction of the corridor)

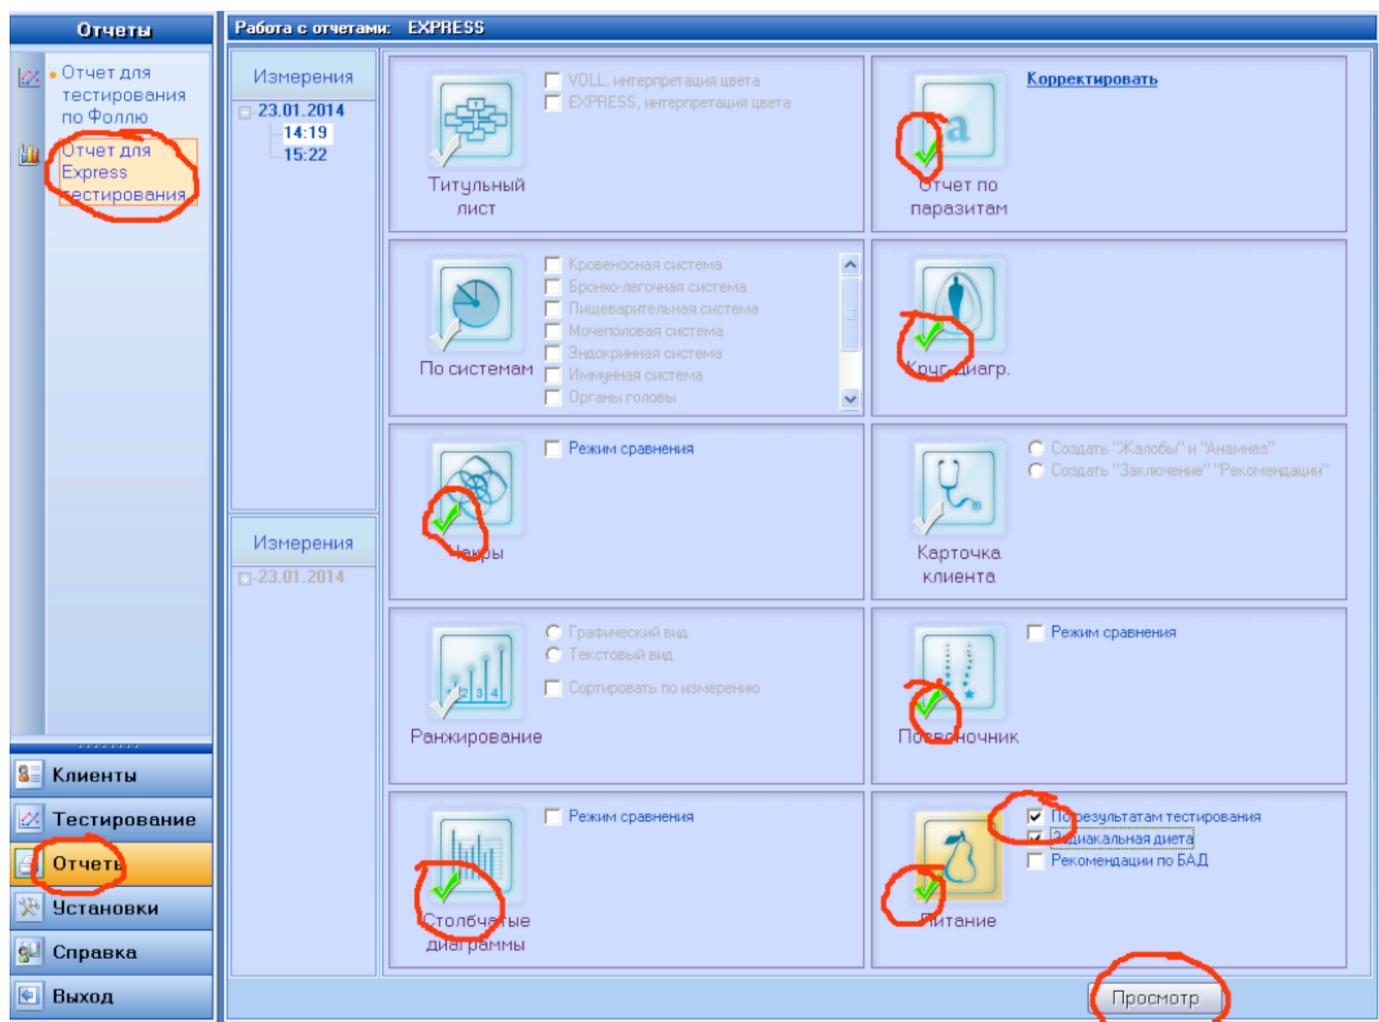

It will be a negative dynamics in the standard direction of the corridor . (the decrease of function or the hyper-function of the organ resonates), that will be the sign of negative effects, the impact of this medication on a given system or an organ.

Rules of the testing

- 1) There should not remain any medicines or substances , their traces or their smell in the device.
- 2) It is necessary to pack the medicine properly before the testing. Materials that are suitable for the packaging of the test object are a transparent cellophane, white plain paper, thin transparent glass, gelatin capsules, foil without paper, plastic or food containers from plastic.
- 3) Foil paper, paper or dark colored glass are not suitable for the testing.
- 4) It is possible to conduct a single, sequential testing and a comprehensive testing of a group of medicines, connecting in turn medicines through bio contour.

The twelfth step : Reporting. There are a lot of variants to visualize reports for the express-testing, which are described above.

Informational and functional relationships of the leads with internal organs and organ systems

The leads	Informational and functional relationships
The forehead is on the left,- -The hand is on the left.	The Central nervous system, the left eye, the left ear, the left frontal and maxillary sinuses, cervical spine, tonsils, teeth the upper jaw, the left heart, the upper lobe of the left lung and nerves vessels and joints of the left hand
The forehead is on the right – The forehead is on the left	The Central nervous system, cervical spine, the frontal sinus, the teeth of the upper jaw,

	tonsils
The hand is on the right – The forehead is on the left,-	the teeth of the lower jaw, tonsils, right ear, right eye, cervical spine, the right departments of heart, the upper lobe of the right lung, and nerves vessels and joints of the right hand, CNS
The hand is on the left.- The hand is on the right	Heart, lungs, esophagus, thyroid gland, cervical-thoracic transition spine, stomach, diaphragm
The leg is on the left- The hand is on the left.	The left kidney, heart, left lung, thoracic spine, esophagus, the stomach, pancreas, sigma, descending colon
The leg is on the right- The leg is on the left	Urogenital organs, straight intestine lumbosacral spine
The hand is on the right- The leg is on the right	Hepatobiliary system, appendix, right kidney, ascending colon, lumbar spine, stomach, pancreas, the small intestine

The possibilities of the express testing allow carrying out a differentiated analysis of the main sectors and of the 47 main organs and systems. The obtained indicators characterize the functional state of main organs and systems at the time of the testing procedure and illustrate their dynamics when the actions or manipulations are carried out. If the test gives you the "the open electrode" It means that the skin of the client is dry and must be moistened.

The interpretation of values of the segmental testing

1)The first segment is evaluated with the largest (the phenomenon of falling the arrow by Voll) It is illustrated in the form of white cap and it has the same value in segmental diagnosis that in the diagnosis by Voll

PFA – the phenomenon of falling the arrow. It is always an indicator of pathological changes. Their nature and severity are reflected in the depth of PFA and in its dynamics.

If the PFA is more than 2 e. it is taken into account in the assessment of the indicators. If the PFA is from 2 to 4.e.it is a compensated process. When it is from 5 to 10 e. there are chronic, sub-compensated processes in the organism. If it is more than 10.e, it is a decompensation. If it is more than 20.e. it is a full breakdown of the compensation mechanisms, irreversible destructive changes in the body.

The depth of the falling – it is conditionally significant measure of the reversibility of pathological changes in the body. If the falling arrow is stopped at the boundary of the normal range, then the process may be reversed, if the falling arrow goes below the range of normal values, then the process is not reversible

2) In the second place it is estimated the PFA. It is the difference between the right side and the left side of

the organ (the right lung and the left lung, the ascending colon or descending colon) It indicates one-sided problems in paired organs, It is assessed only when the indicators are more than 5.e. In general are 32 pairs of leads and 15 unpaired leads (9,10, 11,22,23,24,27,28,29,30,32,36,37,38,39).

Choose the segments where the PFA is above.

3)The lowest value of all segmental leads is located in the hypofunction corridor at 3rd place (it is below of normal in blue and violet ranges

4) The segmental lead with the highest value of the hyperfunction corridor is at the 4th place (it has red and orange ranges).

5) The lack of the functional lability after the impact of the PFA or the harmonization may indicate the presence of morphological changes in the body and reduce the adaptation reserves.

The first measurement is true; the second is carried out after 3-5 mins after the procedure of harmonization (toning, sedation or harmonization, depending on the overall level of the indicators. It shows the functional lability o the adaptation systems.

Throughout time of measurement, the patient should sit quietly and not move the fingers and the limbs, which can cause false.

The resonance testing allows to determine

- stroke, heart attack, hypertension, cancer, etc.
- the latent psychological reasons of diseases (uncertainty, fear, resentment, inferiority complex, depression, stress, etc.)
- initial stage of any pathological process, on pre-clinical level of display of illness when its symptoms are not expressed or absent
- the biological age of the organism as a whole, and also biological age of separate bodies
- the immune and nervous systems, blood, lymph, etc.
- condition endocrine systems and to correct it without application of hormonal preparations
- presence in the body of any kind of viruses, bacteria, mushrooms, worms, their localisation and activity degree
- the missing body vitamins, minerals, enzymes
- the presence of cystic, fibrous processes, etc. of tumors
- to identify abnormalities in the spine and changes in vertebrae bodies
- to establish initially amazed body, the most amazed body, to reveal all pathological chain
- to check up approach or not to the concrete person foodstuff, prosthodontic and orthopedic materials, cosmetic means and jewels, amulets, stones, etc.
- the presence of congenital or acquired intoxication, and the degree of negative influence on an organism of various pathogenic agents: heavy metals, pesticides, herbicides, nitrates, etc.
- define an Allergy kind, to establish its reason, and as to test any kind of allergens
- toxic loading, psychosomatic loading
- degree of efficiency and compatibility of any accepted medical products, food supplements, vitamins, and also possibility of their collateral action without introduction of these means in an organism.
- to determine not only the presence of benign and malignant tumors, but also the predisposition to their

formation;

- identify hidden allergic reactions to specific allergens
- choose an effective and well-tolerated drug;
- assess mental status and degree of exertion of the person;
- to know the level of intoxication (people drink chlorinated water, eat foods with pesticides, etc.);
- to choose food which are best suited for this person

The segmental testing as an universal method, which is based on:

- There is no organ in the body, which exceeds the skin in the quantity of the variety of physiological processes. Therefore the skin reflects the dynamic changes in the regulation of the internal environment of the body.
- Thanks to the evolutionary informational-functional relationships between certain biologically active zones of the skin and the internal systems and organs, it helps to evaluate the biochemical, bio electrical and other processes through coming internal electrical signals to these zones.;
- The numerous empirical studies confirm a correlation between the change in the electrical parameters of the skin in certain areas and changes in the state of internal organs and systems;
- A variety of the informational-functional relationships between the organs and the systems: among other things, they are reflected in the development of various psycho-emotional states of people, which arise through the increasing or decreasing the function of organs and systems. These relationships can be used in the assessment of the body from the standpoint of medical cybernetics.

The interpretation of the values of the segmental testing

The height of the indicator and the interpretation of color values

The color scale value	The interpretation of the values
* Burgundy, red, orange range is a hyper-function	Autoimmune processes (rheumatic, reactive) allergic processes, acute toxic load (Exo or endogenous origin, helminthiasis, bacterial processes, candidiasis internal organs) acute inflammatory process of bacterial origin and nature of fungal (yeast flora)
Yellow range - is moderate a hyper-function	Functional tension; slight pathological processes
Green range- is normal.	Normal values (for hollow organs)
Turquoise range – is a moderate hypo-function.	Functional exhaustion; slight pathological processes
Blue, purple range – is a hypofunction.	Chronic inflammatory processes, chronic intoxication (helminths, systemic diseases such as diabetes mellitus, metabolic syndrome, chronic diseases of the liver and kidney), viral, and fungal processes (Plesneva group of fungi)

It should be noted that the hypo-functional indicators will be in norm only for dense bodies with lobed structure, such like the liver, pancreas, spleen, kidneys, prostate, thyroid gland, lungs .

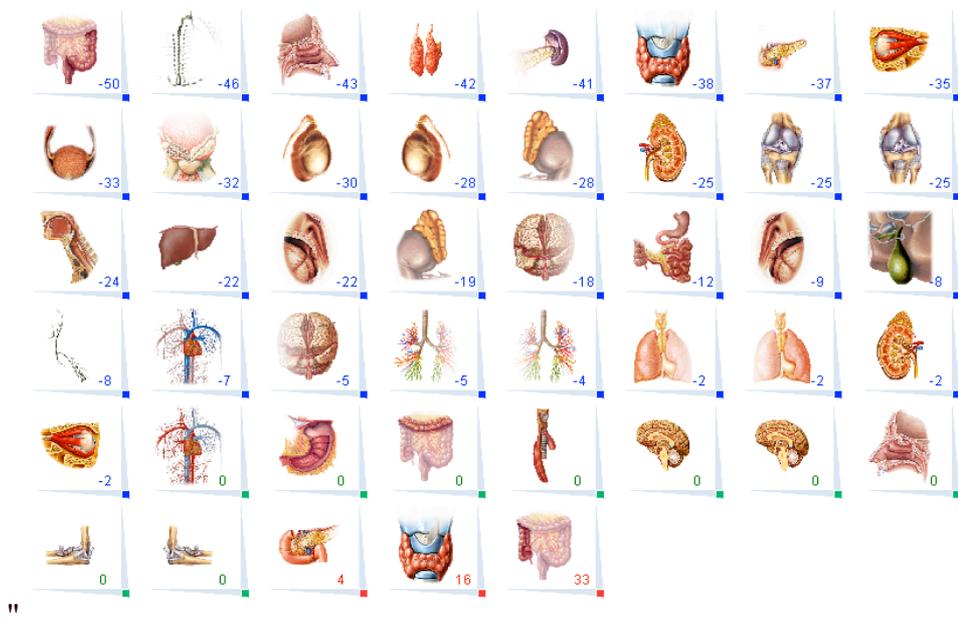

Green range in this case may be a sign of pathological changes in them (autoimmune processes, acute inflammatory processes, allergic and toxic loads.)

It should also take into account the period of maximal activity of the organ.
 Its function will be physiologically increased in this period.

The analytical capabilities of the program allow to make a systematic analysis of the abnormalities, to identify the least and most affected system, to determine the nature of the autonomic regulation of the central nervous system, to set the rate difference balance of acid-base balance, allergic background.

The program provides the opportunity of the dynamic comparison of the test results for analysis of the effectiveness of therapeutic effects, as well as determining the functional lability of the main systems through the overlay of the graphs of two sessions, where the operator may see the dynamics of changes in orientation of graphs and the dynamics bar charts.

The vertebral segments

According to Hippocrates's words, the backbone is a life stem of the human. Avicenna is a barrel, which holds all the organs like leaves on a tree, and it means that it may be a key structure, reflecting our experiences. The posture, is very important in this context, It is the external projection of our self-assessments, individual mind the rate of the reaction to life's difficulties.

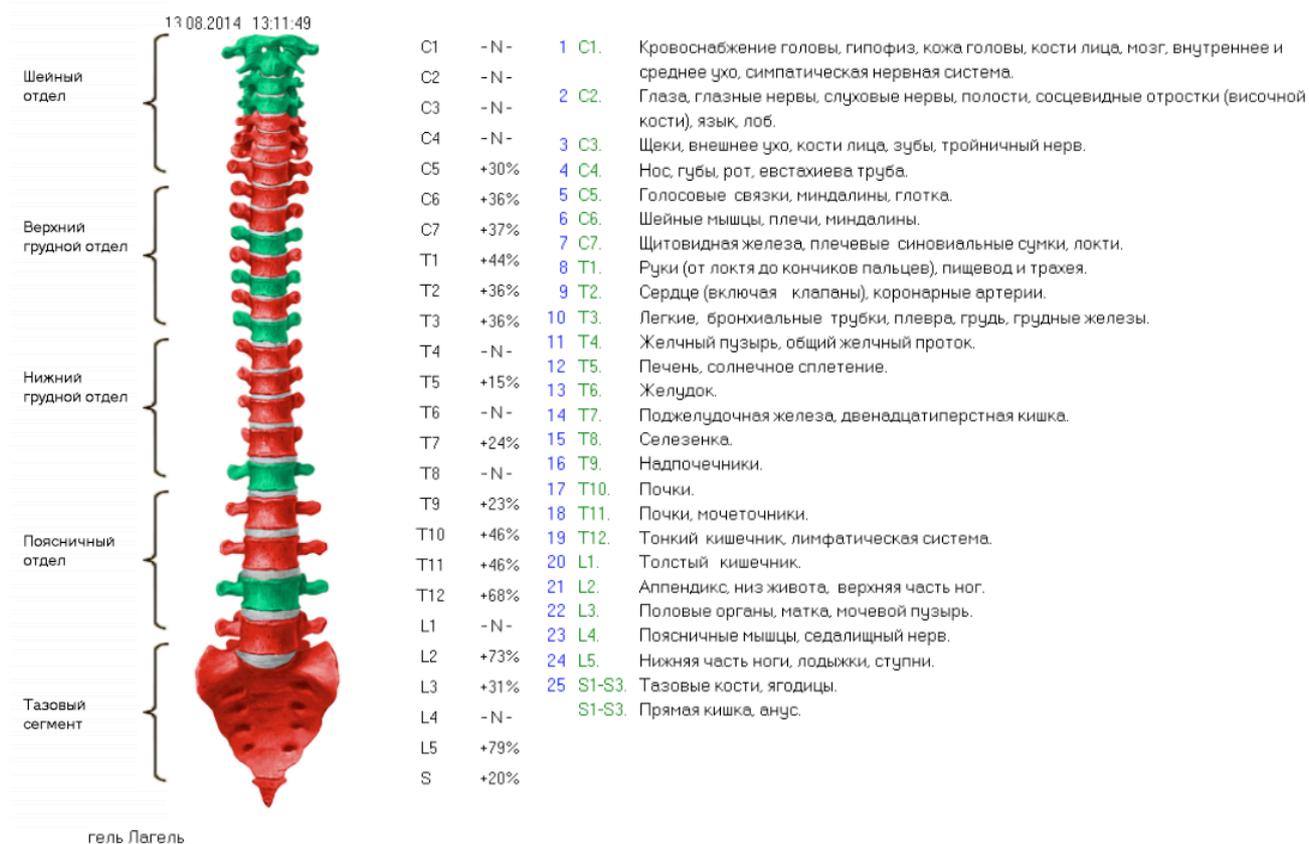

The program allows to visualize the state of the segmental apparatus of the spinal column, illustrates, viscero-vertebral connection, making it easier to diagnose a range of pathologies of internal organs and the spine and allows the technician to analyze the nature of the pathological interactions. For example: a common cause of reactive discopathy is an autoimmune process caused by pathogenic flora in the corresponding segment of the spinal organ, Ureaplasma, prostatitis hlamidiozy, streptococcal pyelonephritis, usually are the cause of structural changes in the intervertebral discs of the lumbar spine, and streptococcal tonsillitis or sinusitis – in the discs of the cervical spine.

The screenshot shows a software window titled "13.08.2014 Иванов Иван Иванович". The main interface is divided into several sections:

- Left Panel:** "Тестирование" (Testing) menu with options: "Измерения" (Measurements), "Сравнение измерений" (Comparison of measurements), "Карточка клиента" (Client card), "Клиенты" (Clients), "Тестирование" (Testing), "Отчеты" (Reports), "Установки" (Settings), "Справка" (Help), "Выход" (Exit).
- Top Panel:** Navigation tabs: "Тестирование", "Системы", "Позвоночник" (Spine), "Чакры", "Круг. диагр.", "Динамика", "БРТ".
- Center Panel:** A 3D model of the spine with a table of segmental data. The table lists segments from C1 to S, with associated percentage values. The spine is color-coded: Cervical (green), Upper Thoracic (yellow), Lower Thoracic (orange), Lumbar (red), and Sacral (dark red).
- Right Panel:** A detailed view of the T7-T12 region, showing an anatomical illustration of the heart and lungs. Below the illustration is a text box titled "T7 - T12" listing associated symptoms and conditions.

 Головная боль, головокружение, снижение памяти, задержка развития речи и отставание в росте у детей, напряжение мышц спины и позвоночника, боль в спине и грудной клетке, межрёберная невралгия, кашель, бронхит, бронхиальная астма, сердечная аритмия, рвота, плохой аппетит, анорексия, хронический энтерит, неврастения, чувство страха, тревожное состояние, судороги, эпилепсия, истерия, чувство напряжения в области затылка, боль в спине и шее, ограничение подвижности позвоночника, контрактура мышц спины, воспалительные заболевания верхних дыхательных путей, боль в области сердца, отрыжка, икота, тошнота, дисфагия, урчание в животе, боль в желудке, панкреатит, спленомегалия, язва, гастродуоденит

The aura or the energy-informational field

One of the creative forms of the visualization of the functional state of the body is the aura, or energy field, divided into separate segments, respectively of the projection of the organs or systems indicating the extent of damage of an organ in percentages. In some cases, it allows the technician to assess areas of projection of pathological conditions.

Артериальная система, левое сердце

Артериальная система, левое сердце

Значение измерения: +63%

при нарушении функции возможны:

- Снижение функций сердца
- Отеки
- Повышение, либо снижение артериального давления
- Повышение либо снижение частоты сердечных сокращений
- Перебои ритма сердечных сокращений
- Головные боли
- Боли в левой руке и левом мизинце

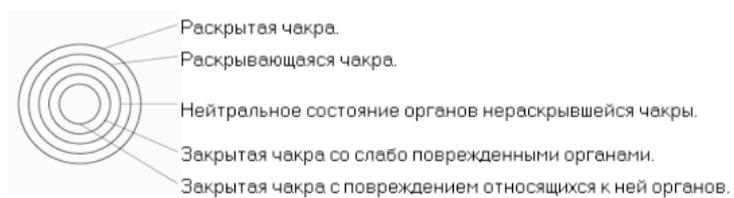

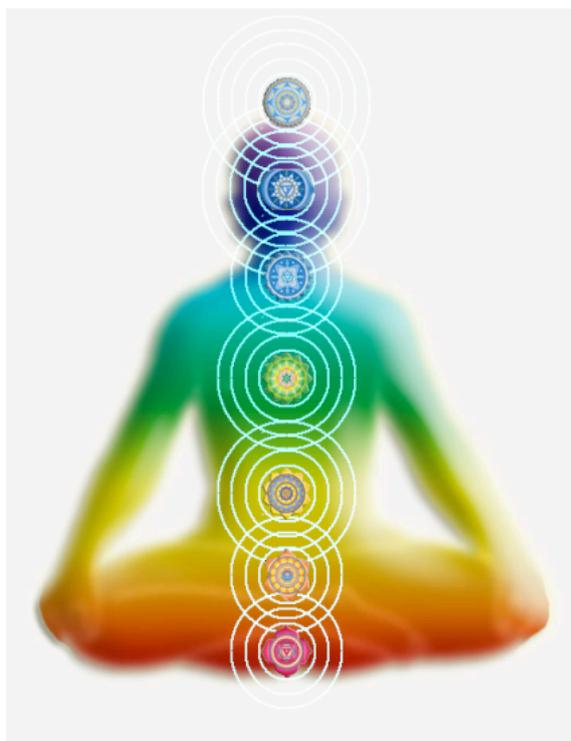

On the information panel in the lower right corner of the screen the user sees an automatic set of functional pathologies possible with the defeat of this segment or organ.

Psychosomatic analysis or analysis of the chakras

Not all psychological problems are hiding inside. We can observe their manifestations in the form of specific disease or pathology of one or another area of the body. They are the somatization problems. The somatization is a reflection of the psychological problems in the form of disease. If you have negative experiences and if they are very long, or they are very strong, the problem worsens your health (not only mental). A person has a headache, lumbar pain, joint pain, stomach pain, heart pain, the blood pressure is unstable. Our own body can be an indispensable tool in solving of the psychological problems. It is like an indicator of the state of our consciousness.

We will try to find the relationship between the emotional and characterological personality types using the ancient system of knowledge about the energy centers – chakras.

The chakras - are energy centers of a human, through which the person participates in various energy processes, in private and universal scales. The chakra is defined in a number of Hindu treatises, the researchers consider that the doctrine of the chakras is a very ancient. It relates to global knowledge and to the space knowledge, much more closely than modern humanity.

Generally there are 7 centers and 7 chakras. They are located along the spine, but they have an impact on the physical body through a system of energy meridians corresponding to internal organs or systems.

Сахасрара Сатья

Сахасрара Сатья(Чакра связи с Космосом)

Свойство чакры:Отвечает за связь человека с космосом

Цвет:Фиолетовый
Звук:Си
Кристалл:Прозрачный кварц
Тело:Духовное
Чувство:Сверхсознание

Функция:соединение нас с нашим духовным "Я", управление ходом мироздания, благородство, сила, созидание во вселенских масштабах, стирание границ между личностью и окружением, и доверие ребенка к Богу и к окружению.

Проблемы в этом центре вызывает: сомнения в божественном, атеизм, деятельность против Бога.

Muladhara chakra, root chakra , coccyx

The first chakra is Muladhara. It is the source of our existence, It closely connects our body to the Earth.

It is located at the base of the spine. Muladhara gives a person a sense of security and comfort. The sanskrit name of this chakra is «support»

In fact, the chakra ensures vitality of the human and fills the human with the energy of the Earth. On an emotional level, it creates courage and persistence, on the sensory it creates responsible for smell, and it has a significant impact on the teeth, bones and nails. This chakra has a decisive role in the struggle of a human for survival. The lack of energetic potential of Muladhara chakra makes a person to be nervous and deprives him of a sense of self-confidence.

In such periods, the chakra builds up a sense of fear. Conversely, excessive stimulation of the chakra provokes arrogance, self-centeredness, greed, and lust. Every person has a body and an animal nature. Everyone can see that the animal nature is a vital part of our existence.

Primary motor association with this chakra is a survival. The first chakra is the most instinctive. It is in charge of food, clothing, shelter, protection, territory. Sex is a tool of procreation and procreation it applies to motor functions of this chakra..

The prospect of survival. The first chakra is located at the very bottom, where there is a process of birth of the individual. To perceive reality from this level is very simple, as each has an innate survival instinct. It's part of our being is under the law of the jungle: «don't trust Anyone!»

The emotional disequilibrium state of the first chakra. The feeling of danger - the first step of the imbalance of the first chakra. If you are unable to get the necessary amount of food, clothing, if you can't find shelter, this chakra starts to manifest itself so strongly that you can't concentrate on anything else.

The difficulty in determining these needs lies in the fact that they are very different for different people. You have to determine what you need to feel safe.

If your first chakra is not balanced, your perception is dominated by the fear of lack. As a result, you find yourself in a vicious circle - you feel unprotected and are the life of the victim, and therefore, find new and new reasons for fear.

When the needs of the first chakra is not balanced, you look at the world through the prism of fear. This feeling is familiar to everyone. The instability can manifest itself like a real lack of anything in the material world is a reflection of the inner imbalance.

Color: red.

Element: The Earth.

Sense: the sense of smell.

Desire: physical contact.

Task: think before you act.

Key word: material.

The driving force is to connect to the Earth.

Stones: ruby, garnet, obsidian.

Location: base of spine

Perspective: survival

Spine – lumbar-sacral.

Meridians of the small intestine and colon, kidneys.

Symptoms – a pain in the lower back, sciatica.

The relationships with the internal organs – kidneys, adrenals, small intestines, rectum.

Function - health, safety

Emotions - fear of losing the financial well-being. The lack of financial support. What will happen to me tomorrow!?

Psychotherapeutic formula – I trust life. I always get out of life everything you need in sufficient quantity. I'm sure in the future.

Swadhisthana is located below the navel.

The second chakra is Swadhisthana. The main driving force of this center is the search for pleasure. It is located at the level of the sacrum, about two inches below the navel, this chakra corresponds with the element of water and, respectively it is associated with the fluid body functions. It represents sexuality, creativity and emotional balance.

In Sanskrit "Svadhithana," means "abode of the life force." Chakra inspires optimism and hope on an emotional level and determines the sense of taste.

As a rule, outgoing people have a well-balanced sacral chakra. In the case of the energy imbalance in this area such diseases, such as arthritis may occur.

The disease is often preceded by symptoms of insufficient energy saturation of swadhisthana: irritability, sadness, resentment. Excessive stimulation of the chakra leads to aggression, despotism and tyranny.

When you are in the state caused by the action of this center, you strive to recreate the pleasure, experienced previously. It does not lead to fulfillment of desires, because there is no immediacy, spontaneity. You turn from the present to the past. The attempt to resist the habit ends by nothing, too. The more you fight, the stronger the desire. To take pleasure, to realize the need for it - that is the antidote.

Color: orange

Element: water.

Sense: taste.

Desires: respect, recognition.

Task: to love and to serve others.

Key word: public.

Stone: carnelian, amber

Location: pelvis

Perspective: satisfaction and pleasure

Function - emotion, vitality

Spine – lumbar

Complaint - pain in the lower back

Meridians of the bladder, spleen and pancreas, large intestine

The organs of the urogenital sphere, pancreas and spleen, large intestine

Emotions – the desire of love and pleasure. uncertainty and fear of love, the injuries of childhood.

Psychotherapeutic formula – I am open to all joys of life. The universe loves and supports me in all its manifestations

Manipura chakra, solar plexus

The third chakra of Manipura is a source of self-confidence, awareness of their own abilities to extricate yourself from the outside world and at the same time to have an impact on this world. This center is responsible for the formation of your principles, ethics and beliefs. Chakra is located in the solar plexus. Its name literally translates as "navel jewel."

It gives person a dignity and a satisfaction. The chakra spreads its influence on two areas - on

vision and on the digestive system. It is not surprising that, when a person is happy, he sees the world "through rose-colored spectacles".

The chakra determines the sensitivity of the person but on an emotional level it inspires a sense of confidence, self-esteem and optimism. However, unjust life can lead to the accumulation of chakra in aggressiveness and negative emotions.

The excessive stimulation of Manipura leads to the fact that the person devotes all energy to the work; the person becomes fussy and too demanding. In case of the lack of saturation of the chakra, person loses confidence, becomes timid and indecisive.

The third chakra helps you to say "no" when you don't agree, and "yes" in the case of consent. All of these properties are reflected in the intellect. In the end, you can direct your will where you want and avoid what you do not need. The ability to choose is the most important property of the third chakra. This energy center leads to the improvement of skills in various forms of self-expression. He is responsible for self-control, restraint and self-discipline. And if you don't possess the self-control in due measure, then, small energy conflicts constantly appear around you.

The third chakra gives you an understanding of what in the outside world is right and what is not. That it gives you the strength to stand up for their beliefs and confront your fate. The third chakra creates in a person a kind of code of honor. The intelligence is introduced in the perspective of the third chakra through differentiation. You must have a very good understanding of what is important to you and what is not.

The proper use of the will leads to differentiation. It does not lead to suppression and failure, namely differentiation. You should know how to win their battle. You must know that you fight for your beliefs and do not it because it is expected of you by others.

If the simple survival is enough for the first chakra, the search for permanent pleasures is need for the second. the third chakra requires constant developing of self-control. The insight is the main characteristic of the healthy of third chakra. You have to know when to stop and when to refuse pleasure - it is like a part of self-control. It needs to be directed not only to the outside world, but also inside yourself. This is the right use of your will.

The main symptoms of the imbalance of the third chakra in the case of excessive rejection of one's own will are the following symptoms guilt it embraces you when you forced someone to deny that the flattery of others, the constant feeling of being in the victim role. Inability to stand up for oneself and the feeling of helplessness are additional symptoms of this imbalance. All of these behaviors arise from low self-esteem and lack of confidence, which lead to the imbalance.

The unbalance behavior is also quite easy to spot. If you are frustrated, an angry person who don't constantly do what he wants, it is an imbalance in the third chakra. The life of such person is controlled by the desires of others; they are not the needs of one's own heart. The guilt and shame keep him from having to argue and stand up for oneself. The person tries to be "good", he sees the only way to do this, and it is to live according to the expectations of others.

This type of behavior cannot be called "service," rather it is "wait upon". These words have totally different meanings. "To serve" means to do good, to help people. When you wait upon, you fulfill what you expect and require. Waiting upon others, you thereby demean yourself. The prospect of the third chakra helps you to feel the border between "service" and «wait upon» and choose the right type of behavior.

The imbalance of the third chakra can be caused by an imbalance of the first two chakras. If you do not feel safe, if you cannot enjoy life, then the hierarchical system of life becomes your reality.

A person, who is better than you, appears in your life and you accept one's point of view on the world and you are instantly stunned if something contradicts this view..

If you constantly have small energy conflicts, at first consider whether your sense of security is

satisfied and whether you know how sincerely and fully enjoy the world around us.

The volitional state of equilibrium gives your life the flexibility, you start to look for the cooperation in other . It is not a competition. The power of your will is quite big and you know that you are able to make a decision when the situation requires your intervention and participation. You are safe enough, so if all goes well, you can afford to relax and to enjoy the harmony. Your life is quite mobile and flexible, you can achieve great success, because there are no more conflicts around you. You effectively interact with others..

If you want a harmonious and peaceful life, give up the need to be right. It is the perfect description of the balanced third chakra. However, we should not associate the solar plexus chakra with the passivity. it is an energetic, a strong-willed center, and when it is in the balance, the will can be used most effectively for yourself, without infringement of interests of others. When you will develop your ability to use the power of the will. You definitely will have conflicts with those who are committed to the struggle of egos. Awakening the third chakra, you will begin to attract problems. Will is committed to will and if your will is awakened, you'll begin to attract people who are also work on their own free will. Only you decide whether to avoid unnecessary conflict or to fight with all the strength in the case that the question is really important for you.

Color: yellow

Element: fire.

Sense: sight.

Desire: the desire to understand.

Objective: to establish good relations with loved ones people .

Key word: intelligence.

Stones: amber, yellow tourmaline, citrine and Topaz

Location: solar plexus

Perspective: will power

Function, power, career, freedom

Spine – lumbar-thoracic transition.

Complaints of pain in the corresponding back

Meridians – the liver, gall bladder, stomach

Organs – the liver, bile ducts, stomach

Emotions – anger, irritability, self-doubt, the desire to control others, strong need for control or subjugation, bias, categorical.

Psychotherapeutic formula- Life is a precious gift, each moment is filled with joy, my mind is clean and free from prejudices, I am happy to know everything new, I am protected.

Anahata chakra, the heart - is involved in all the processes of human life

The fourth chakra Anahata - "The path of the heart» is a contact with the eternal source of love. It is not a strategy of life, it is not a life plan, and it is pure joy. It allows you to live your life, being at this level of consciousness, and influence on the material world.

Chakra is located at the level of the heart, in the center of the chest. She is responsible for love, harmony in relationships, a sense of compassion and controls of the sense of touch. When we care about someone, the heart is opened to this person. In the far East the chakra is called the "temple of love". "Anahata" means "invincible".

At the emotional level the chakra is responsible for compassion, self-respect and respect for others. People who have a dominant influence of anahata are sympathetic, they take care about themselves and their loved ones..

People with a kind of "heart failure" can be defined at first sight. They are sensitive, compassionate. They reach self-denial in a desire to please others. They often feel self-pity and fear. The majority of dependents and hangers-on have energy-attenuated Anahata.

In the case of excessive stimulation of this chakra people become choosy, capricious, imperious. The Triad. The three upper chakras are conventionally called triad. They vibrate at a higher level..

We are accustomed to the fact that life is a struggle, and we believe it is necessary to develop a plan for the defense, protection and sustainment. This view arises from a mentality based on fear of deprivation. If you choose the path of your heart, there is no room for fear in your mind. You have to believe that in the space of a magnetic appeal, you can count on an abundance of that you will have a happy and prosperous life..

The more you love, the more facilities and opportunities for love there is in your life. It's very simple. Perhaps it is even too easy for modern people - we are suspicious of all affordable things. "You get only what you pay for" - such an approach deprives us of many simple and affordable pleasures of life. To awake heart - that's the most important goal in life. You do not have to pay or sacrifice anything, you need only faith to achieve goal. You have to believe that life will not break you, if you remove the protection. And it will happen this way: remove the protective cover, allowing the flow of life wash over you. And believe, that love - is the main driving force of the universe.

Each of us is born alone. At birth we acquire a physical body, mind, habits, character and ego. It defines us as an individual, different from others. The first three chakras are connected with the preservation of uniqueness, of separation. With the awakening the fourth chakra we move away from the uniqueness and begin to feel the unity of life.

The purpose of the fourth chakra is the feeling of personal and universal love,. You have to feel love, at least a harmonious relationship that blurs the distinction between you and other people. The only way to satisfy the heart chakra. It is through the fourth chakra you reach the collective levels of reality. The three lower chakras operate with personal energy, separates you from others. The three higher chakras - these are the collective aspects of the 'I', reinforcing the connection with universal energy. The heart chakra is a place where the personal and the collective aspects of your inner "I", are connected and separated from each other.

The prospect of love. The first awakening of the heart chakra is felt as a kind of things, which you do at rare fleeting moments when you feel complete harmony. Everything is in balance, you do not have to worry about. you are satisfied of yourself, the lowest chakras are balanced, you are able to settle for the small pleasures of life fully. The lowest chakras are balanced, you are able to settle for the small pleasures of life fully. Being in this state, you can think about how to perceive the world not only from the point of view of survival and competition. If you learn to listen to your heart, it will enter you into the habit.

From this point of view, you see your reflection in other people. You cease to defend against them and compete with them. Heart pushes you to cooperation, not coercion. The need to be right pushes you back to the lower chakras with their competitive prospects. At the level of the fourth chakra is no place for defense. joy comes from full acceptance of life and other people.

The transition from the level of the third chakra to the fourth is very important, as it demands a fundamental revision of perception of life. At the level of the fourth chakra is no sense of rivalry as you begin to communicate with others through the heart. From the level of the heart, chakra is only possible way of cooperation. This prospect is accompanied by a sense of abundance; you begin to realize that the world has enough for everyone. Compassion awakes. We are inseparable, we are connected

Awakening the fourth chakra, you begin to look at life through the prism of love. Love is called by

the three lower chakras, always has an ulterior motives . They are security, sex or power. But love is given by the fourth chakra is love for the name of love. It does not satisfy needs. You don't need anything in return. You get an overwhelming feeling and you want to share it with others. From the perspective of the fourth chakra love has no conditions. You don't care how other people live, how they affect your life. Obviously, there are the more peace and harmony in the relationship based on the fourth chakra, because you have ceased to defend themselves against others and to judge them..

Unbalanced state of the fourth chakra. Sentimentality is the main manifestation of unbalanced fourth chakra. "Broken heart" is unable to separate their problems from the surrounding issues, therefore the contact that person with others is unhealthy and painful. As a rule, the result of such an approach to life is the desire to do something for others in the hope of a good attitude on their part

Color: green.

Element: air.

Sense: sense of touch.

Desires: to love and be loved.

Objective: to gain confidence in oneself.

Key word: emotions.

Stones: aventurine, rose quartz

Location: heart

Perspective: love

Function- love, compassion

Spine – thoracic

Pain in the thoracic spine

Meridians – heart, lungs, gall bladder

Organs – heart, lungs, gall bladder

Emotion – a lack of joy, a belief in the need for tension, hardness, competition, the neglect of joy for the sake of money, career, to curb the feeling of love, distrust, inability to be happy and to enjoy life, inability to forgive, resentment, depression..

Psychotherapeutic formula – I take life with love and joy, I am free to enjoy every minute of it, I fully trust its.

Vishuddha, the throat

Vishuddha Chakra The fifth chakra teaches to perceive own originality correctly, in whatever form it is manifested.

Chakra is located at the level of the throat. "Vishuddha" is translated from Sanskrit as "clean". This energy center is a kind of guide the thoughts and ideas of the upper chakras to the four lower.

Chakra is responsible for the sound and is the speech center that controls the communication and self-expression. At an emotional level, it contributes to the emergence of new ideas, love and understanding between people.

Balanced chakra, calms the mind, develops a sense of time and strengthens faith. Excessive stimulation of chakra makes a person arrogant, haughty, dogmatic, and overbearing. The lack of stimulation of the chakras makes a person weak, deceitful, and unreliable. The fifth chakra encourages you to express yourself creatively. The creativity is at the highest level of the mind.

When certain personality traits collide and interact with the collective mind, the creativity is born. We think about the throat and speech, but the expression is much more important because the level of creativity is not limited only to conversation. Writing, drawing, dance, music, meditation and other innumerable forms of creative expression are available through the fifth chakra.

To grasp oneself from the perspective of the fifth chakra is much more difficult than from the third. The third chakra is associated with self-control, strategic self-knowledge, which in combination with the force of will shape the way of perception itself. Self-knowledge at the level of the fifth chakra is the opening of the tendencies of its development.

When you manage to balance the fifth chakra, you will gain new knowledge due to the fact that will begin to look at life in new ways. If you are an artist, your work will be original to those born under the influence of the moment. When it comes to any relationship, your insight will make this relationship alive and developing. If you are a business, then new ideas will begin to visit you, which will surely bring you success. Whatever area of life and work touched the case, a fresh perspective and sense of reality will help you to derive maximum benefit.

This feeling arises only when you balance your creative person, you will gain the ability to use it on their own, the ability to resist the common point of view, if the situation requires. You should be able to escape from the logical aspect of life, to allow yourself to see the abstract connections between totally unrelated at first glance events. You should be able to escape from the logical aspect of life; to allow yourself to see the abstract connections between totally unrelated at first glance events. You can calmly discuss your ideas with others, even if they do not agree with your point of view. However, at the same time, you are not going to seem like a know-it-all who is not interested in the opinions of others and that there is nothing to learn from them.

Color: blue

Sense: sound.

Desire: the searching of inner peace.

Objective: to risk.

Key word: ideas.

Stones: celestine, aquamarine, chrysoprase

Location: neck

Perspective: creation

Functions - communication, creativity, harmony

Spine – cervical

Complaints of numbness of the hands, pain in the cervical spine, limitation of the turns of the neck

The meridians and endocrine system, liver, small intestine.

Organs –thyroid gland, immune system (thymus), throat and trachea, liver, lymphatic apparatus of the small intestine.

Emotions – feelings of helplessness and hopelessness, I will never obtain what I want, I am not noticed, the containment of the emotions of anger

Psychotherapeutic formula – I go beyond all limitations, I'm happy and love myself, I accept myself , I love and appreciate myself, I know my price.

Ajna chakra, the middle of the forehead

The sixth chakra Ajna.

The chakra is located at the level of the forehead, the eyebrows. In Sanskrit, "ajna" means "command." Chakra controls the mind and it is a kind of command post in relation to other energy centers. And really, the thought always precedes the action.

Unfortunately, there are few people able to control their thoughts. At the emotional level, the chakra increases the level of awareness of everyday reality and forms the spiritual structure of human.

As already mentioned, the Ajna is responsible for the intuitive perception, including such minor things as a sense of someone else's mood and empathy. Have you ever feel absolutely devastated after contact with another person? If yes, then you have been affected by someone else's negative energy. In this incident the culprit could not express their negative emotions out loud, because we are susceptible to the impact on the subconscious level. An excessive stimulation of this chakra makes a person proud, authoritarian, imperious and dogmatic. A classic example of such person is Adolf Hitler. The lack of stimulation Agni makes people shy, losers.

When a person reaches the level of the sixth chakra or the level of «the third eye», he has the ability to change polarity. Before you have awakened this center, a polarity of consciousness was perfectly normal: things were right or wrong, good or bad. If there are two polar opinions, one of them is true and the second is not. On the sixth level of consciousness, you can rise above polarity and see life through the prism of the broader views that encompass all aspects of life. It is the "single state of consciousness." This approach perceives all things as a manifestation of one Great Spirit. The feeling of grace permeates this perspective. However, because your perception of life has expanded to include all existing points of view, this feeling is not surprising and does not irritate you.

The imbalance of the sixth chakra. The main danger in this way is the possibility to become addicted to drugs and alcohol. They create pseudo "third eye", because changing your perception of reality on distorted. The results of such distortion will manifest itself in various ways: from the belief that "I" above all things, to the realization that you are destined to bear your cross and no one can save you from this burden. In both cases, the pure experience of recognizing God in all aspects of life overlaps with personal perception.

What is not a part of the whole? Any exclusivity does not belong to the whole. The commitment to any religion or doctrine, claiming the truth in the last instance, instead of expanding our perspective, it significantly limits them.

Nevertheless, not only drugs form a distorted view of reality. The dependence on sexual fantasies definitely distorts perception. It is an example of how the imbalance of the lower chakras affects the manifestation of the Supreme. The invention wholly relates to the scope of the sixth chakra, and the sexual content of these fantasies coming from the second chakra, determines this action. Another example of an unbalanced sixth chakra is the person who is not able to separate imaginary from reality. Such people ascribe to others the qualities, which they do not possess, or fall in love with people, presenting them, as they really are not.

The achieving of a balanced level of consciousness of the sixth chakra. If you managed to balance the sixth chakra, you become aware of the flow of reality, and being able to merge with it, develop your own intuition. Are you ready to adapt to situations that are beyond your control? The mere knowledge of how life events is beyond our control is a testament to the life force, existing outside the individual. You have to believe that to merge with this power is your main purpose.

Faith is strengthened as you see the fruits of the rejection of a personal journey. All you wanted before now became available. Your needs are met without any effort on your part, you just have to fully immerse yourself in awareness of the life force that exists around you. Faith is not based on beliefs, it comes from experience. It seems that you are in the right place and at the right time, without planning it in advance. You just listen to the voice of your intuition and can read the signs and messages that make your path easier and clearer.

Learning to be in equilibrium at this level of consciousness, you become a visionary. You start to

understand what does not speak words, you think in images, pictures, intuition.

To rise above the polarity means to be above the conflicts. The conflict arises from the commitment of the parties to their points of view, contradicting each other. Abandoning the polar view of life, you are able to see a lot more, to rise above conflict and live in peace. Even in the center of chaos and hatred permeate the modern world, balanced state of the sixth chakra allows you to move to a different, higher level of conflict, the reality.

When you gain the ability to understand the profound significance of each life experience, the reality is opened you on the other hand. You merge with yours desires, you attain the grace, the life is revealed to you, and magic invades. The magic throws its loop on your actions, at least from the point of view of others. However, It changes nothing. You follow the flow of life, and you do not go your own way.

Color: blue

Astrological: mutable.

Desire: to be in harmony with the Universe.

Goal: to make dreams come true.

Key word: intuition.

Stones: fluorite, Indigo tourmaline

Location: the forehead, the point between the eyebrows

Perspective: the quest for transcendence

Functions –intuition

Spine – cervical

Complaints of limitation of motion of the neck, pain and stiffness in the cervical spine.

Meridians - small intestine, liver, endocrine system

Organs – hypothalamus, pituitary gland, pineal gland, eyes, sinuses.

Emotions – irritability, stubbornness, lack of flexibility

Psychotherapeutic formula of harmony and love fill me and the world around me, I have a great relationship with life and the world, and I trust life and its flow. I am part of this multifaceted universe.

Sahasrara chakra

The seventh chakra is Sahasrara "1000 petals"

The chakra is located in the parietal region; It controls the most powerful vibrations of the body. The artists often paint portraits of highly spiritual people, portraying a glowing halo.

Catholic monks cut out of tonsure to release this part of the head from all-superfluous. In Sanskrit, "Sahasrara" means "thousand" and the chakra is depicted as a Lotus flower with a thousand petals

This chakra maintains a balance between the body of the human and the inner spiritual meaning. A mystical understanding of reality, the awareness of the deep interconnections of all things it is also carried out under its leadership.

In this sense, the rejection of self and expansion of consciousness to the universal level are extremely difficult tasks, by which human attains one's true nature.

The excessive stimulation of chakra makes people irritable, impatient and depressed. In such cases there is the probability of occurrence of severe headaches. The lack of stimulation leads to feelings of loneliness, unwillingness to communicate with other people and the loss of joy of life.

When you go to this level of consciousness of the seventh chakra, all life is perceived as a spiritual experience. Your life will become magic educational game, in which there is loss and disappointment, and there is good understanding of the process of learning and getting experience.

The unbalanced state of the seventh chakra. The unbalanced seventh chakra is a very dangerous place. In this condition you can live in an independent reality, which has nothing to do with the world around you. You can lose touch with reality and lose the ability to interact with the world around you .

It is possible that many patients in mental hospitals have reached this high spiritual level, but out of touch with the lower chakras, and self. They live in a different reality, having no connection with the lower chakras.

The another imbalance at this level can be called a mentality of the "shopping list". The doctrine of a "New Era" says about improvisation on the theme of what you want to see in your own life. If you want to find a new relationship or find a new job, you have to make for yourself a list of your needs and meditate until your desire is fulfilled. It is a workable approach; at least those who have experienced it for themselves evidence it. However, the list is compiled from your ego and when ego intrudes into the sphere of action of the higher chakras, the balance is impossible to achieve. Your ego says that it knows more that you need than God. Instead, to surrender completely to the flow of your life, you try to orient it. As a result, you lose the magic that could happen to you if you completely surrendered to the will of Providence..

This is the main paradox. When the ego finally gives in and submits to the divine will, you get what the entire ego wanted, and more! You may not know this in advance, you need to believe that God knows best. Most people says that when they fully obeyed the Supreme will, they simply got what their ego was so afraid of losing to it. Of course, they can get a lot more that were even able to imagine. You should not limit the divine will, believing that they know better what is good for you. The task is complicated when it involved other people, especially if you are married and you have children.

Color: purple.

Desire: the desire to penetrate the essence of things.

The task: gaining knowledge and wisdom.

Key word: spirituality.

Stone: clear quartz, amethyst

Location: the highest point of the head

Perspective: spirituality

Function – consciousness, overcontrol

Spine – cervical - occipital transition

Complaints – headaches, vascular dystonia, vegetative disorders

Meridians – heart, gallbladder, blood circulation

Organs – cerebral cortex, cerebral vessels

Emotions – distrust of life process and others, pride, arrogance, guilt, the desire to think about everything and to control everyone and everything, the inability to express emotions positively, to attempt containment of emotions.

Psychotherapeutic formula- I trust the natural flow of life, The life always provides me with everything necessary. I am part of the Universe. Everything is going well.

Reports on test results

The main functions of rapid testing "Bris" - *are reports on the test results*, consisting of three types: etiological factor (the percentage of parasites in the body), probability of violation and the affected organs and systems.

Etiological factor

Herpes .Humam Type5 = 92%, Streptococcus mitis = 92%, Staphilococcus varneri = 92%, Streptococcus lactis = 82%, Micoplazma fermentas = 82%, Clonorchis sinensis (яйца)= 73%, Streptococcus mitior = 73%, Campilobacter fetus = 73%, Herpes vir.Humam Type 7 = 69%, Ureaplazma urealyticum = 64%, Chlamydia trachomatis = 64%, Clonorchis sinensis (взр.особь) =55%, Penicillinium notatum = 47%, trichinella pseudospiralis (яйца)= 46%, Trichinella pseudospiralis (взр.особь) = 46%, Sporotrix shchencin = 46%, Sacharomitses Bulardi = 42%, Penicillinum rogueforti = 42%, Humenolepis nana (яйца) = 41%, Bac.Acidophilus (кисломолочн.бактерии) = 41%, Streptococcus mutans = 36%, Candida stellatoidea = 36%, Neotrichium candidum = 36%, Penicillinum frequentans = 36%

The affected organs and systems

Venous system, right heart, the organs of sight, hearing, organs of vision, hearing, maxillary and frontal cavities , frontal gaymorovu cavity, mammary gland, mediastinal lymph nodes, neck Lymph nodes, tonsils and pharyngeal ring . spleen, gall bladder, stomach, horizon .the division of the colon, pancreas, pharynx, esophagus, uterus, bladder, leg joints , leg joints

Probabilistic violations

Gimenolepidoz. The weakening of the protective functions of the body. Herpetic weights. Cholangitis. Malabsorption in the intestine. Intestinal dysbiosis. The irritable bowel syndrome. A deficiency of vitamins of group B. the Dyskinesia of a biliary tract hypokinetic type. A deficiency of vitamin C. Atomikos. Lymphadenitis. Arthritis. Osteoarthritis. Hypofunction of the adrenal glands. Fungal diseases. The lack of sodium. A deficiency of potassium. Insulin, too little, Chronic hypertrophic rhinitis. A deficiency of chromium. Fungal weights. The faringomikoza. Antimodification enteropathy. Infection of the urogenital. Painful menstruation, problems with menstruation. Ureoplazmoz. Premenstrual syndrome. Sympatho-adrenal crises. Chlamydia.

The food navigator

Another function of the program **is a food navigator**. It allows for automatic selection of individual diet according to the test results, as well as for the zodiacal principle. This function is available in section reports.

group.info

Пищевой навигатор (здоровое питание и диета)

Продукты рекомендованные:

Мясо: говядина, курица отварная, паровая, запеченная,
Рыба, морепродукты: рыба отварная,
Овощи, фрукты: картофель, свекла, морковь, кабачки, капуста цветная, помидор,
Мучные: хлеб из муки грубого помола,
Молочные продукты: ацидофильное молоко, кефир, творог обезжиренный, творог высокой жирности, сыры неострые,
Орехи, масла, сладости, жиры: масло сливочное, мёд (вместо сахара),
Напитки: отвар шиповника, чай зеленый, чай некрепкий,

Исключить из рациона:

Мясо: копчености, субпродукты (печень, почки, сердце, язык, мозги), телятина, колбасные изделия, мясные консервы,
Рыба, морепродукты: рыба солёная, рыбные консервы, икра красная, икра черная,
Овощи, фрукты: лимон, апельсин, грейпфруты, ананас, банан, виноград, фрукты, овощи, слива, киви, курага, капуста белокочанная, редька обыкновенная, репа японская, салатная, брюква, лук репчатый, чеснок, шпинат, щавель, абрикос, дыня,
Супы, каши: бульоны мясные, бульоны рыбные, бульоны грибные, каша пшенная на молоке, каша пшенная на воде, каша перловая на молоке, каша перловая на воде,
Орехи, масла, сладости, жиры: шоколад,
Приправы: соль,
Бобовые: блюда из бобовых,
Напитки: чай крепкий, кофе натуральный крепкий, кока-кола, напитки газированные,
Прочие: жирные, соленые, острые блюда, жареные и тушёные

Qualitative levels of the testing .

The principle of pharmacological testing is based on repeated measurements with the inclusion of segmental diagnosis. The first dimension can show the results of the previous test, especially if it was not sustained interval (when the testing objects are from the resonator chamber, it is necessary to wait for the body to react to a new medicine). If a human takes a medicine orally, the test occurs during the period of maximum activity (under pharmacodynamics). The selection of doses necessary to consider the dosage of the medicine i.e. to test a one-time dose of the drug.

Testing rules

Testing of medicines is done by connecting remote biokontur.

1. There should not be any other medicines or substances, or smell in the camera.

2 The test object or the product should be packed.

- Materials which are suitable as packaging test object are cellophane, white paper, clear glass, gelatin capsules, foil.

- Foil paper, paper or dark colored glass are not suitable for the testing.

4) It is possible to conduct single, sequential testing and comprehensive testing of a group of medicines, connecting in turn medicines through bio contour

Evaluation criteria: the product fits well if all the indicators are aligned and they are moving in the "green corridor"; It fits bad, if there are blue bars; it does not fit – if there are red and blue colours.

BRT. This section of the program contains programs for passive bio-resonance correction.

The endogenous correction or the passive bio-resonance correction.

Bioresonance therapy was invented in Germany by Dr. Franz Morell and by an engineer E. Raschel in 1976. Her idea is in complete harmony with the ideas about human as a holistic self-regulating system, which must take into account the many interconnections among its cells, tissues, organs and systems. Moreover, the basis functioning of the body are the energy-exchange processes.

An organism as a self-organizing system has everything it needs to maintain its homeostasis. Therefore, the goal of energy-informational medicine, including bio resonance therapy is to activate natural mechanisms to restore and maintain health,.

A human is infinitely large and simultaneously infinitely small system of electromagnetic oscillations. The fluctuations originate in the cosmos, in the Solar system, in small and large galaxies in the organs and tissues, cells, molecules, atoms, protons and electrons. Moreover, people live in this huge vibrational spectrum. Moreover, life without these electromagnetic oscillations is unthinkable. That is why the basis of regulation of all functions of the body are electromagnetic waves, generated by the body and is supplied from the outside.

The basic principles of bio resonance therapy are based on the fact that every living organism and all its functioning systems are sources of extremely weak electromagnetic oscillations frequency range, which, in turn, cover a wide range of wavelengths from very long to very short. These fluctuations are inherent in the body are called physiological or harmonic oscillations.

When introducing pathogens or occurrence of the disease the body forms new sources of electromagnetic oscillations, called pathological or disharmonious they violate the physiological balance. The body gets sick in that case when it is not able to maintain a dynamic balance between physiological and pathological oscillations; it is not able to neutralize the pathological oscillations and to reduce them to an acceptable level. Therefore, the goal of bio resonance therapy is to "cleanse" of the body from harmful oscillations and the extra "feeding" his physiological frequencies.

The oscillations (signals) have electromagnetic nature, they can be transferred to special equipment. After the special processing and filtering, the oscillations return to the patient. The electromagnetic field of the patient immediately reacts to these therapeutic signals and corrected fluctuations again are sent to the device, etc. Thus, in the process of therapy patient and device form closed circuit of adaptive regulation, as processed vibrations returned to the patient every time.

The resonance frequency are characteristic for the normal evolutionary development of the body, but displaced by disease pathological factors are the body's priority and so they digest quickly and restore its normal operation. This occurs due to repetitive over a short period of time and all the time the adjustment of therapeutic interventions. The energy component of these effects is extremely low, but their high effectiveness is based on the exact physiological frequency and the amplitude characteristics of a living organism that is the influence of information.

This is the main principle of curative effect of bio-resonance. However, it can successfully be complemented by a multiresonant therapy in the form of electro therapy, magnetic therapy, laser therapy or other therapy. This is especially true in situations when the body is lost or it is weakened information about the normal physiological fluctuations as a result of illness or some external influences , and it can be granted using low-power generators of electromagnetic signals. The specific modulation of these signals of the organism allows perceiving the information by those organs and tissues for which these oscillations are resonant.

Using the above techniques, the bio-resonance weakens and inhibits unwanted vibrations and fills the body with physiological fluctuations. As pathological electromagnetic oscillations are the most important in the biochemical and morphological disturbances of the body. The method "destroys", "deletes" all causes of disease. from the body.

It should be noted that our country is an advanced not only in the application and in the use of bio-resonance. We have developed and have modified various areas of this technique, the equipment and the hardware-software complexes, which are known beyond the borders of our country.

The efficacy of bio resonance, ranges from 75 to 85 % according to various estimates. Now it is used in the treatment of a wide range of diseases in different fields of medicine. The appointment of modes PBRT is determined by indicators of functional segmental testing (express), It is stage of the underlying disease, which is concomitant by diseases.

PBRT is carried out according to the common modes and to 20 custom. The average session duration is 20 minutes and it is determined individually based on client status at the time of testing. Combination of general and selective modes is optimum..

[The common mode](#)

- The common mode is preferable:
- in the initial stages of correction of chronic diseases;
- in acute condition.

–Horizontal mode

- in acute and spasmodic pain;
- in bronchopulmonary pathology;
- vertebral pain and joint pain;
- with an absolute predominance of the sympathetic division of NS. (all indicators are red);
- in the presence of differential side, the difference in paired segments is more than 5.e..

–[Diagonal mode](#)

- with a soft, harmonizing mode;
- pain in the region of the heart;
- syndrome hypertension;
- dystonic indicators

–[Vertical mode](#)

- vascular dystonia on hypotonic type;
- the predominance of parasympathetic NS. (all indicators blue);
- depression of the upper parts of the sympathetic NS and the expression of the lower (organs above the diaphragm are the blue indicators, the organs below the diaphragm are red).

–[Circular mode](#)

- the lack of patterns in the indicators (presence of MDD, various degrees of reactivity of the tissues);
- skin diseases and reactions (itching, rash).

[Sampling modes of the bio-resonance correction](#)

The number of organs and tissues included in the pathological process determines the purpose of sample modes. With the defeat of at least three organs, it can be used for selective modes of the meridians of these organs. With the involvement in the pathological process a greater number of organs and systems of (long-existing chronic pathology) for selecting modes use the principle of "stars" (Wu-Hsing). Meridians heart, liver, kidneys are used no more than 3 min.

It is not recommended to use them in severe conditions associated with the pathology of this body.

Meridians:

[Lymph Meridian \(the paired Meridian of the kidneys\)](#)

It is used when the endogenous and exogenous lymph congestion:

- chronic inflammatory processes;
- helminth, protozoan infection;
- chronic viral infection;

- a virus;
- an immunodeficiency;
- edematous syndrome;
- metabolic disorders;
- a pathology of the respiratory tract and gynecological diseases;
- ENT pathology.

Light (pair Meridian – the large intestine)

Organs and tissue systems are related to the lung Meridian:

- Central and peripheral nervous system: the hindbrain, the cerebellum, the bridge of the brain, and tactile sensitivity;
- the organs of vision: the macula, fovea, cornea, sclera;
- the auditory system: the Eustachian tubes;
- sinuses: ethmoidalis;
- almonds: pipe;
- joints: shoulder, elbow wrist;
- skeletal system: the parietal and temporal bones of the skull, bones of the upper extremities;
- cardiovascular system: the blood vessels of the upper extremities;
- upper respiratory tract and respiratory system: the trachea, Central bronchi, the left upper and right middle lung lobe;
- muscles: muscles of the upper extremities;
- endocrine glands: adrenal glands;
- teeth: 5 4 4 5

7 6 6 7

- gastrointestinal tract: the mucosa of the oral cavity, the channel of the pylorus of the stomach, the large intestine;
- pancreas: small excretory ducts of the pancreas;
- hepatobiliary system: lobar bile duct and cystic duct;
- bodies of hemo-immunogenesis - and immunogenesis: plasma cells and fixed macrophages skin;
- the organs of the urinary system: renal pelvis and its branches, the lower part of the bladder;
- female genital organs: cervix, left mammary gland and the segments of the mammary glands
- male sex glands: glands topferova

It is used no more than 3-5 min. Indications for use:

- all diseases of the lungs and upper respiratory tract, accompanied by cough, shortness of breath, dyspnea, sputum and other symptoms;
- cardiovascular disease with the phenomena of stagnation;
- allergic diseases;
- diseases of the skin;
- kidney disease;

- neuroses;
- the effects of a stroke;
- pain along the Meridian;
- diseases of the teeth, gums.

The large intestine (Meridian pair lungs)

Organs and tissue systems are related to the Meridian of the large intestine:

- Central and peripheral nervous system: the hindbrain, the cerebellum, the bridge of the brain, and tactile sensitivity;
- organs of vision: vitreous, cornea, sclera;
- the auditory system: the Eustachian tubes;
- sinuses: ethmoidalis, cavity of the nose;
- almonds: tube, laryngeal, pharyngeal;
- joints: shoulder, elbow, wrist;
- skeletal system: the parietal and temporal bones of the skull, bones of the upper extremities;
- cardiovascular system: the blood vessels of the upper extremities;
- upper respiratory tract and respiratory system: the trachea, Central bronchi, the left upper and right middle lung lobe;
- muscles: muscles of the upper extremities;
- endocrine glands: adrenal glands;
- teeth: 5 4 4 5

76 67

- gastrointestinal tract: the gums, the channel of the pylorus of the stomach, the large intestine;
- the pancreas, small ducts of the pancreas;
- hepatobiliary system: lobar bile duct and cystic duct;
- bodies of hemo - and immunogenesis: plasma cells and fixed macrophages skin;
- organs of the urinary system: renal pelvis and its branches, the lower part of the bladder;
- female genital organs: cervix, left mammary gland and the segments of the mammary glands
- male gonads: topferova cancer.

It is used to treat:

- diseases of the colon and other gastrointestinal tract, accompanied by flatulence, diarrhea, gastralgia;
- peptic ulcer and 12P. intestine;
- pathology of the urinary tract;
- gynecological diseases;
- chronic colitis (constipation);
- diseases of the mucous of the nose and paranasal sinuses;
- bronchopulmonary pathology;
- detoxification (endogenous, in the pathology of the kidneys, diathesis, allergic dermatitis);

- diseases of the skin: rash, dermatitis;
- headache;
- tinnitus;
- trigeminal neuralgia;
- neuritis of the facial nerve.

Nerve degeneration (paired Meridian of the stomach)

It is used to treat:

- vegetative dystonia;
- hypothalamic syndrome;
- diabetes I and II type;
- migraine;
- state of stress;
- pathology of sleep;
- diseases of the stomach;
- spasmolyt;
- psychosomatic pathology;
- reflux esophagitis;
- encephalopathy;
- polyneuropathy;
- syndrome arrhythmia;
- joint pain (spondylosis);
- sweating;
- polyuria;
- flatulence.

Vascular Meridian of the pericardium - (pair Meridian – hearts)

The organs and tissue systems are related to the Meridian of the pericardium:

- Central and peripheral nervous system: olfactory field of the brain, a pale balloon, striatum, VIII pair of cranial nerves (cranial nerves);
- vision organs: choroid;
- hearing: the outer ear and ear canal;
- sinuses: sphenoid sinus;
- tonsils: lingual;
- joints: shoulder, elbow, wrist;
- skeletal system: the parietal and temporal bones of the skull, bones of the upper extremities;
- cardiovascular system: arteries, the vessels of the upper extremities;
- upper respiratory tract and bronchopulmonary system: bronchioles, upper lobes of the lungs;

- muscles: muscles of the upper extremities;
- endocrine glands: anterior lobe of the pituitary, thyroid gland;
- teeth: 8 8
- gastrointestinal tract: the tongue, the fundus and antrum of the stomach and 12-duodenal gut, Vater nipple, small intestine and ascending Department of the colon; the pancreas: the tail of the pancreas;
- hepatobiliary system: liver slices, arch of the gallbladder;
- bodies of hemogenesis - and immunogenesis: Paperovy plaque;
- organs of the urinary system: the medulla - pyramids of the kidneys, the lower part of the ureters;
- female genital organs: uterine horn, right mammary gland and E-segments of the mammary glands;
- male sex glands: seminal vesicles

Indications:

- vegetovascular dystonia;
- discirculatory and post-traumatic encephalopathy;
- the consequences of violations of cerebral circulation;
- diabetes I and II type;
- headaches;
- arterial hypertension;
- of kidney disease;
- vascular pathology of vision, hearing;
- chronic infection;
- sweating;
- polyuria;
- venous disease;
- asthenic, anxious and manic state;
- emotional lability;
- neuroses;
- bronchial asthma, laryngitis;
- gastralgia;
- menstrual cycle;
- impotence.

Meridian of the allergy (pair Meridian – bladder)

Indications:

- skin diseases (rashes, dermatitis);
- syndrome migraine;
- vegetative dystonia;

- sweating;
- psoriasis;
- pathology of the urogenital sphere;
- respiratory allergies;
- food allergy;
- capillarity

Meridian ADES (pair Meridian – pancreas – spleen)

Indications:

- psychosomatic pathology;
- degenerative diseases of the mucous membranes;
- chronic diseases of the parenchymatous organs (cellular phase);
- chronic tonsillitis, adenoid vegetations, polyps of the paranasal sinuses;
- inflammatory processes in the organs of the endocrine system (tiroidin, pancreatitis).

Endocrine Meridian (the paired Meridian – small intestine)

Organs and tissue systems are related to the Meridian of the endocrine system:

- Central and peripheral nervous system: the somatosensory cortex, the septum of the brain, the hypothalamus, hippocampus, spinal cord and somatic nervous system in General, cervical ganglia, VII and IX pair of cranial nerves;
- organs of vision: the retina, anterior chamber, and sclera;
- hearing: the middle and internal ear, the labyrinth,
Snail, peri - and endolymphatic ducts;
- joints: the temporomandibular, the angle of placebologic extremities;
- skeletal system: frontal bone;
- muscles: muscles of the neck and back;
- cardiovascular system: the blood vessels of the head;
- upper respiratory tract and respiratory system: the alveoli;
- endocrine glands: endocrine system (General);
- teeth: 1 1
1 1
- gastrointestinal tract: the fundus and cardiac part of the stomach and 12-duodenal gut and a horizontal division of a colon;
- the pancreas: the tail of the pancreas;
- hepatobiliary system: hepatocytes, the upper part of the gallbladder;
- bodies of hemo - and immunogenesis: the red pulp, thymus;
- organs of the urinary system: gates, sinus and cortex of the kidneys;
- female genitals are: the fundus, the right mammary gland and the F-segments of the mammary glands;
- male sex glands: the prostate.

Indications:

neurocirculatory dystonia;
discirculatory and post-traumatic encephalopathy;
the consequences of violations of cerebral circulation;
hypothalamic syndrome;
dysfunction of the thyroid gland (hypothyroidism, hyperthyroidism);
psoriasis;
disease metabolic disorders (obesity, atherosclerosis);
cystic ovarian processes;
diabetes I and II type;
alcoholism;
chronic infection;
premenstrual syndrome;
neuritis of the auditory nerve, hearing impairment;
joint disease in the course of the Meridian

Meridian of the heart (a pair of Meridian – pericardium)**Organs and tissue systems are related to the Meridian of the heart:**

- Central and peripheral nervous system: olfactory field of the brain, a pale balloon, striped body;
- vision organs: choroid;
- sinuses: sphenoid sinus;
- tonsils: lingual;
- joints: shoulder, elbow, wrist;
- skeletal system: the parietal and temporal bones of the skull, bones of the upper extremities;
- cardiovascular system: arteries, the vessels of the upper extremities;
- upper respiratory tract and bronchopulmonary system: bronchioles, upper lobes of the lungs;
- muscles: muscles of the upper extremities;
- endocrine glands: anterior lobe of the pituitary, thyroid gland;
- teeth: 8 8

8 8

- gastrointestinal tract: the tongue, the fundus and antrum of the stomach and 12-duodenal K-ka, Vater nipple, small intestine and ascending Department of the colon;
- the pancreas: the tail of the pancreas;
- hepatobiliary system: liver slices, arch of the gallbladder;
- bodies of hemo - and immunogenesis: Peyer's patches;
- organs of the urinary system: the medulla pyramids of the kidneys, the lower part of the ureters;
- female genital organs: uterine horn, right mammary gland and E-segments of the mammary glands

- male sex glands: seminal vesicles.

Use it no more than 1-2 min It may be used for diseases:

- pancreas;
- of the small intestine;
- diseases of the mucous membranes of the nose, oral cavity, paranasal sinuses;
- nervous system diseases, accompanied by emotional lability.

Meridian of the small intestine

Organs and tissue systems are related to the Meridian of the small intestine:

- Central and peripheral nervous system: olfactory field of the brain, a pale balloon, striatum, VIII pair of cranial nerves (cranial nerves);
- vision organs: choroid;
- hearing: the outer ear and ear canal;
- sinuses: sphenoid sinus;
- tonsils: lingual;
- joints: shoulder, elbow, wrist;
- skeletal system: the parietal and temporal bones of the skull, bones of the upper extremities;
- cardiovascular system: arteries, the vessels of the upper extremities;
- upper respiratory tract and bronchopulmonary system: bronchioles, upper lobes of the lungs;
- muscles: muscles of the upper extremities;
- endocrine glands: anterior lobe of the pituitary, Thyroid gland;
- teeth: 8 8

8 8

gastrointestinal tract: the tongue, the fundus and antrum of the stomach and 12-duodenal gut, Vater nipple, small intestine and ascending Department of the colon;the pancreas: the tail of the pancreas;

- hepatobiliary system: liver slices, arch of the gallbladder;
- bodies of hemo - and immunogenesis: Peyer's patches;
- organs of the urinary system: the medulla - pyramids of the kidneys, the lower part of the ureters;
- female genital organs: uterine horn, right mammary gland and E-segments of the mammary glands;
- male sex glands: seminal vesicles.

Indications:

- liver disease, gall bladder;
- pancreas;
- pathology of the stomach (gastritis, peptic ulcer disease, impaired acidity);
- diseases of the small intestine;

- immunodeficient state
- disease of the auditory nerve
- diseases of the paranasal sinuses (sphenoid)
- diseases : shoulder, elbow, wrist joints
- diseases of the outer ear;
- dyspepsia;
- dysfunction of the thyroid gland (hypothyroidism, hyperthyroidism);
- heart disease;
- pathology suction, fermentopathy;
- psoriasis, eczema, neurodermatitis, allergic dermatitis, diathesis rash
- prevention and diseases of the skin appendages (hair, nails, teeth);

The Meridian of the pancreas and spleen.

Organs and tissue systems are related to the Meridian of the spleen and pancreas:

- Central and peripheral nervous system: the midbrain, the lower and upper division, the X pair of cranial nerves;
- organs of vision: ciliary body;
- sinuses: maxillary (maxillary), nasopharynx!
- tonsils: laryngeal ;
- joints: temporomandibular, hip, knee, ankle;
- skeletal system: bones of the facial skull;
- cardiovascular system: veins of the abdominal cavity;
- upper respiratory tract and bronchopulmonary system: medium-sized bronchi, the upper and lower lobe of the right lung;
- muscles: muscles of the neck and shoulder girdle;
- endocrine glands: thyroid, parathyroid, thymus;
- teeth and the oral cavity: pharynx, sublingual gland, parotid gland, oropharynx, submandibular gland;
- gastrointestinal tract: salivary glands, tongue, the esophagus, antrum part of stomach, body of stomach, descending division of the colon;
- pancreas: acinar tissue of the pancreas head;
- hepatobiliary system: the segmental bile ducts, the neck of the gall bladder;
- bodies of hemo - and immunogenesis: spleen;
- organs of the urinary system: renal pelvis, the middle part of the bladder;
- female genital organs: the uterus, ovaries,
- A-segments of the mammary glands;
- male gonads: testis, sperm duct.

Indications:

- chronic inflammatory processes of organs and tissues;
- immunodeficiency;
- heart disease;
- diabetes I and II type;
- pathology of the stomach (gastritis, peptic ulcer disease, impaired acidity);
- disease metabolic disorders (obesity, atherosclerosis);
- osteochondrosis, spondiloartrozy;
- myofascial syndrome;
- psoriasis;
- detoxication of Exo - and endotoxins;
- alcoholism;
- diseases of the eye;
- gynecological diseases;
- menstrual cycle;
- diencephalic syndrome.

The liver Meridian**Organs and tissue systems are associated with the liver Meridian:**

- Central and peripheral nervous system: the thalamus, hypothalamus;
 - the organs of sight: the cornea, the iris, the eye muscles;
 - paranasal sinuses: the cavernous sinus;
 - tonsils: Palatine;
 - joints: ankle, knee;
 - skeletal system: frontal bone;
 - muscles: muscles of the lower extremities, smooth muscle;
 - cardiovascular system: arteries and veins of the lower extremities;
 - upper respiratory tract and respiratory system: bronchial tubes, right middle and left lower Lobes of the lungs;
 - endocrine glands: thymus;
 - teeth and the oral cavity: oropharynx, lips,
- 3 3
- 3 3
- gastrointestinal tract: the esophagus, the body and fundus of the stomach, cecum, Appendix;
 - pancreas: acinar tissue of the pancreas body;
 - hepatobiliary system: the liver, interlobular bile ducts, the body of the gallbladder;

- bodies of hemo - and immunogenesis: spleen, thymus;
- organs of the urinary system: renal sinus, the upper part of the ureters;
- female sex organs: fallopian tubes, ovaries, and D segments of the mammary glands;
- male gonads: the testes, the deferent ducts

Not recommended for heavy use. It is used to treat:

- detoxication of Exo - and endotoxins;
- alcoholism;
- a fatty degeneration of the liver;
- allergic dermatitis, diathesis (rash, itching);
- deficiency of vital energy;
- the predominance of parasympathetic NS (all indicators blue);
- heart disease;
- pathology of the pancreas, fermentopathy;
- gynecological diseases;
- menstrual cycle;
- diencephalic syndrome.

The articular degeneration Meridian (the paired Meridian – gall bladder)

It is used in the treatment of:

- viral hepatitis
- pancreatitis;
- of gallbladder diseases;
- diseases of the genitourinary system;
- inflammatory and degenerative diseases of the joints;
- of osteoarthritis, spondiloarthrosis.

The stomach Meridian (the paired Meridian – pancreas –spleen)

Organs and tissue systems are related to the stomach Meridian:

- Central and peripheral nervous system: the midbrain, the lower and upper dvupolnye, the X pair of cranial nerves;
- organs of vision: vitreous body and lens;
- sinuses: maxillary (maxillary), nasopharynx;
- tonsils: laryngeal, lingual, Palatine;
- joints: temporomandibular, hip, knee, ankle;
- skeletal system: bones of the facial skull;
- cardiovascular system: veins of the abdominal cavity, common carotid artery, arteries of the lower extremities;

- upper respiratory tract and bronchopulmonary system: medium-sized bronchi, the upper and lower lobe of the right lung;

- muscles: muscles of the neck and shoulder girdle;

- endocrine glands: thyroid, parathyroid, thymus;

teeth and organs of the oral cavity: pharynx, sublingual gland, parotid gland, oropharynx, submandibular gland;

765 567

54 45

- gastrointestinal tract: salivary glands, tongue, esophagus, antral part of the stomach (privratnikovym cave), the body of the stomach, the descending division of the colon;

- pancreas: acinar tissue of the pancreas head;

- hepatobiliary system: the segmental bile ducts, the neck of the gall bladder;

- bodies of hemo - and immunogenesis: thymus;

- organs of the urinary system: renal pelvis, the middle part of the bladder;

- female genital organs: the uterus, ovaries,

A-segments of the mammary glands;

- male gonads: testis, semessersesy channel.

Indications:

- ulcerative processes of the stomach and 12-p. intestine;

- chronic hypoacid gastritis;

- chronic tonsillitis;

- breast;

- diseases of the pancreas;

- thyroid disease;

- the large intestine;

- obliterating endarteriit;

- biliary dyskinesia;

- chronic cholecystitis;

- impaired function of the adrenal glands;

- dystonia;

- chronic colitis;

- violation of lymph drainage from the lower extremities.

Meridian STD (pair Meridian – lung)

It is used to treat :

- lungs;

- adhesions at any location;

- autoimmune processes;
- postoperative condition;
- benign tumors;
- adenoids;
- polyps, papilloma;
- rheumatoid processes;
- tonsillitis and polyarthritis.

Meridian skin degeneration (paired Meridian of the large intestine)

It is used to treat:

- lung disease;
- the large intestine;
- pancreas;
- allergies;
- edematous syndrome;
- skin rashes, itching, etc.;
- enteropathy.

The fatty degeneration Meridian (the paired Meridian of the liver)

It used to treat;

- diseases of the liver and bile ducts;
- disease Alzheimer;
- migraine;
- diseases of the pancreas, fermentopathy.
- atherosclerosis
- disorders of lipid and cholesterol metabolism

Meridian of the gallbladder

Organs and tissue systems related to the Meridian of the gallbladder

- Central and peripheral nervous system: the thalamus, interstitial the brain, gray hill, midbrain, reticular formation, cerebellar, II and V pairs of cranial nerves, the Central parts of the sympathetic nervous system;
- organs of vision: iris, retina, choroid;
- paranasal sinuses: the cavernous sinus;
- tonsils: Palatine;
- joints: hip, knee;
- skeletal system: frontal bone;
- muscles: muscles of the lower extremities, striated muscle;

- cardiovascular system: arteries and veins of the lower extremities;
- upper respiratory tract and respiratory system: bronchial tubes, right middle and left lower lobes of the lungs;
- endocrine glands: thymus;
- teeth and the oral cavity: oropharynx, lips;

3 3

3 3

- gastrointestinal tract: the esophagus, the body and fundus of the stomach, cecum, Appendix;
- pancreas: acinar tissue of the pancreas body;
- hepatobiliary system: the liver, interlobular bile ducts, the body of the gallbladder;
- bodies of hemo - and immunogenesis: spleen, thymus;
- organs of the urinary system: renal sinus, the upper part of the ureters;
- female sex organs: fallopian tubes, ovaries, and D segments of the mammary glands
- male gonads: the testes, the deferent ducts.

Indications:

- Central nervous system diseases;
- diseases of the eye;
- pathology of the stomach;
- joint pathology;
- sleep disorders;
- dystonia;
- pathology of the pancreas;
- liver disease;
- biliary dyskinesia.

Meridian of the kidneys (the paired Meridian – bladder)

Organs and tissue systems related to the kidney Meridian:

- Central and peripheral nervous system: medulla oblongata;
- organs of vision: the lens, conjunctiva;
- the hearing in General;
- sinuses: frontal sinus;
- tonsils: pharyngeal;
- joints: sternoclavicular;
- skeletal system: occipital bone, ribs, bones of the lower extremities;
- cardiovascular system: the blood vessels of the lower extremities;
- upper respiratory tract and bronchopulmonary system: the lower lobes of the lungs;

- muscles: muscles of the lower extremities;
- endocrine glands: pineal gland, parathyroid glands;
- teeth: 2 1 1 2

2 1 1 2

- gastrointestinal: pyloric part of the stomach, the sphincter 12 duodenal ulcer, rectum, anus;
- the pancreas: the main excretory duct of the pancreas;
- hepatobiliary system: common hepatic and bile ducts, sphincter of Oddi and the nipple of Vater;
- bodies of hemo - and immunogenesis: eritropoetinov substance of the kidneys;
- organs of the urinary system: the kidneys in General, the mouth of the ureters, bladder, urethra;
- female sexual organs: left ovary, tube, uterus, vagina, external genitals, With segments of the mammary glands
- male sex glands: the right lobe of the prostate, testicles, epididymis, deferent ducts, cavernous bodies, penis.

It is used to treat:

- renal disease;
- the metabolic disorders;
- pathology of the adrenal glands;
- diseases of the urinary tract;
- hair loss;
- disease of the rectum;
- pathology of the lumbar-sacral spine;
- vegetovascular dystonia;
- edematous syndrome;
- detoxication of Exo - and endotoxins.

Meridian of the bladder (paired Meridian of the kidneys)

Organs and tissue systems related to the Meridian of the bladder :

- Central and peripheral nervous system: the medulla, the brain stem, I and XI pairs of cerebral nerves, nerves of the lower extremities;
- organs of vision: the lens, conjunctiva;
- the hearing in General;
- sinuses: frontal;
- tonsils: pharyngeal;
- joints: knee, ankle;
- skeletal system: occipital bone ribs, lower limbs.
- cardiovascular system: the blood vessels of the lower extremities;
- upper respiratory tract and bronchopulmonary system: the lower lobes of the lungs;
- muscles: muscles of the lower extremities;

- endocrine glands: pineal gland, parathyroid glands;
- teeth: 2 1 12
21 12
- gastrointestinal: pyloric part of the stomach, the sphincter 12 duodenal ulcer, rectum, anus;
- the pancreas: the main excretory duct of the pancreas;
- hepatobiliary system: common hepatic and bile ducts, sphincter of Oddi and the nipple of Vater;
- bodies of hemo - and immunogenesis: eritropoetinov substance of the kidneys;
- organs of the urinary system: the kidneys in General, the mouth of the ureters, bladder, urethra;
- female genital organs in General, With segments of the mammary glands;
- male gonads in General.

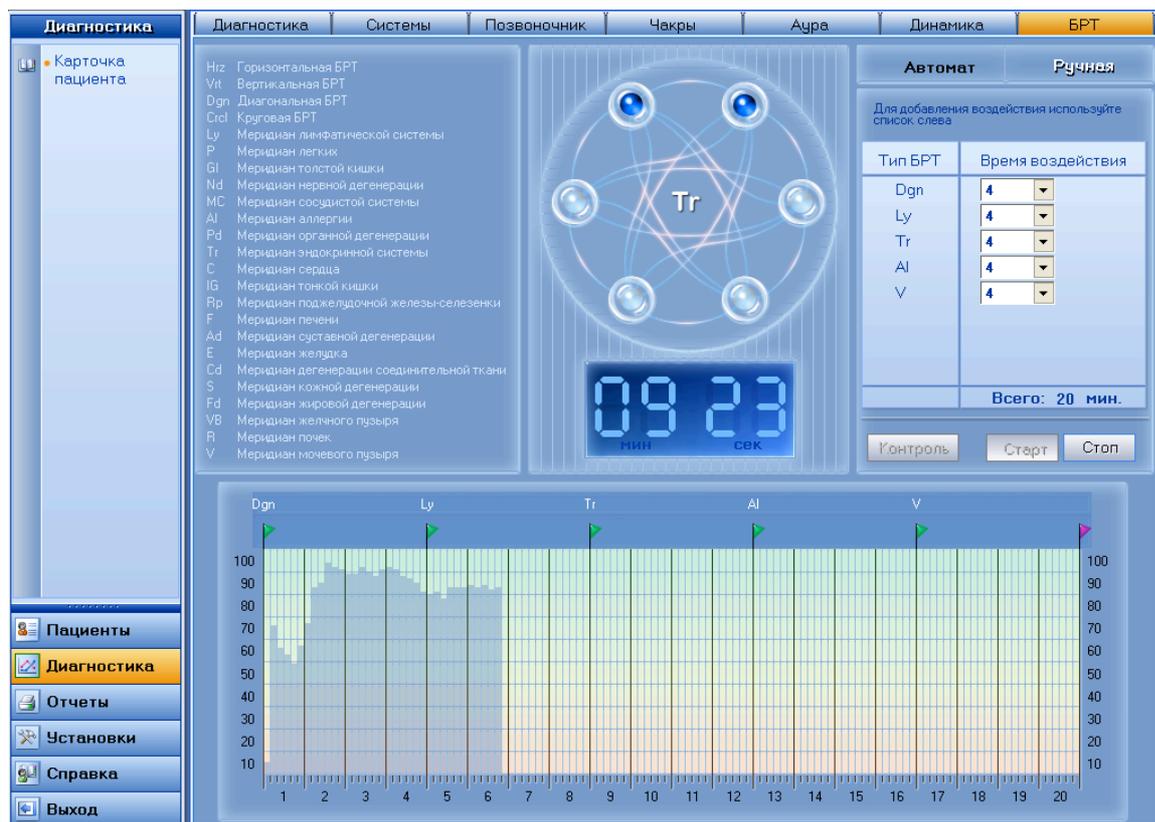

It is used to treat

- the Central nervous system;
- the paranasal sinuses (frontal);
- the genitourinary system;
- endocrine system;
- vegetovascular dystonia;
- edematous syndrome;
- detoxication of Exo - and endotoxins;
- lumbosacral spine;
- stomach;
- osteochondrosis, spondylosis.

Programmatic opportunities of the express-test "Bris"

The section of DBK of the express-test "Bris" is a comprehensive set of programs DBK, which are described above. It provides an automatic selection of programs of BRT for user convenience, also it provides the manual creation of DBK prescription, where the time per program can be set manually from the total time per the session. It is 20 minutes.

In the case of start-prescription program automatically switches the installed program, as well as an ongoing feedback of the process is displayed on the panel at the bottom of the screen. Total session time is limited to 20 minutes, however, if it is necessary, two or three cycles can be carried out by changing the front of each new cycle of the DBK prescription.

Oriental theories

One of the dominant laws of ancient oriental philosophical thought is the "Big dual universal law of alternation and addition" It is the **"Yin-Yang"**, which according to its main provisions are consonant with the dialectical law of unity and struggle of opposites. There are two opposing forces, represented by the terms of **"Yin-Yang"**, that everywhere and in everything. They also are the main categories for the explanation existing in nature.

Although **Yin** and **Yang** are opposite principles, they should not be frozen in time, because they have their own development inside processes, and that the most importantly, they have mutual transitions with interpenetration. Each structure has elements of other opposites. It creates a complete harmony of nature and life. In normal functioning, the relationship, Yin and Yang remains a state of complete balance. In case of violation of this balance occurs abnormal phenomenon with the predominance of one entity over another, which ultimately leads to death. The ancient doctors studied the pathology, diagnostics and treatment, based on the conclusions from this ancient Oriental theory

Теория У-Син

The theory of "five elements", which is in close relationship with the concept of "Yin-Yang". The element is not a material object, for example water or growing trees. It is a vibration or quality of energy, it sound in unique manner in a certain way.

The main features of each object, with which we can to describe an object, event, or the properties of vibrations, colors, geometric shapes, directions, seasons, taste, emotions, characters, etc.

Examples,

THE WATER - accumulation, downward movement, cold, winter, night, the North. Wavy, asymmetrical shapes, all shades of blue, the Moon, the flow. The taste is salt, internal, the organ is a kidney, the emotion is fear.

THE TREE - germination, the steady development, spring, dawn, morning, the East. Form vertical rectangles, all shades of green, wind, childhood, live trees. The taste is sour, the organ is a liver, the emotion is anger.

THE FIRE – expansion. Movement in all directions, external action, brightness, summer, the South, noon, the heat, the Sun. Triangular shape, red and orange, youth, zipper, Phoenix, flame. The taste is bitter, the organ is a heart, emotion - joy.

THE EARTH – gathering, receptivity, fertility. center, basis, maturity, diversity of qualities, early autumn. Form of a square or a horizontal rectangle, crystal, ceramics, color warm yellow, ochre. The taste is sweet, the organ- stomach, the emotion – concern, prudence.

THE METAL –concentration, tension and hardness. West, sunset, autumn, old age, wisdom. Round, oval or spherical shape, white color, metallic. Metal objects, gold, power, Sky. The taste is spicy, organ- lung, the emotion — sadness.

It is known that all of the phenomena of the world characterized by a certain cyclical:

- birth;
- the maximum activity;
- decline;
- minimal activity.
- These four successive states (stages of development) were rated their symbols:
- Tree – is a symbol of birth,
- Fire – is a symbol of maximal activity,
- Metal –is a symbol of decline,
- Water is a symbol of minimal activity.

"the tree"	"the fire"	"the Earth"	"the metal"	"the water"
spring	summer	the offseason	autumn	winter
The East	The South	Center	The West	The North
Green	Red	Brown	White	Blue
The wind	Heat	Humidity	Dry	Cold
Birth	Development	Formation	Wilting	Disappearance
Sour	Bitter	Sweet	Sharp	Salt
Anger	Joy	Meditation	Sadness	Fear
Liver	Heart	Spleen	Lungs	Kidney
Gallbladder	The small intestine	Stomach	The colon	Bladder
Eyes, tongue	language wrot	Mouth	Nose	Ears

Muscle	Blood	Connective tissue	Leather	Bones
--------	-------	-------------------	---------	-------

It is known that all of cyclical processes occur on The Earth, and all processes belong it. There is one more element. It is the Earth.

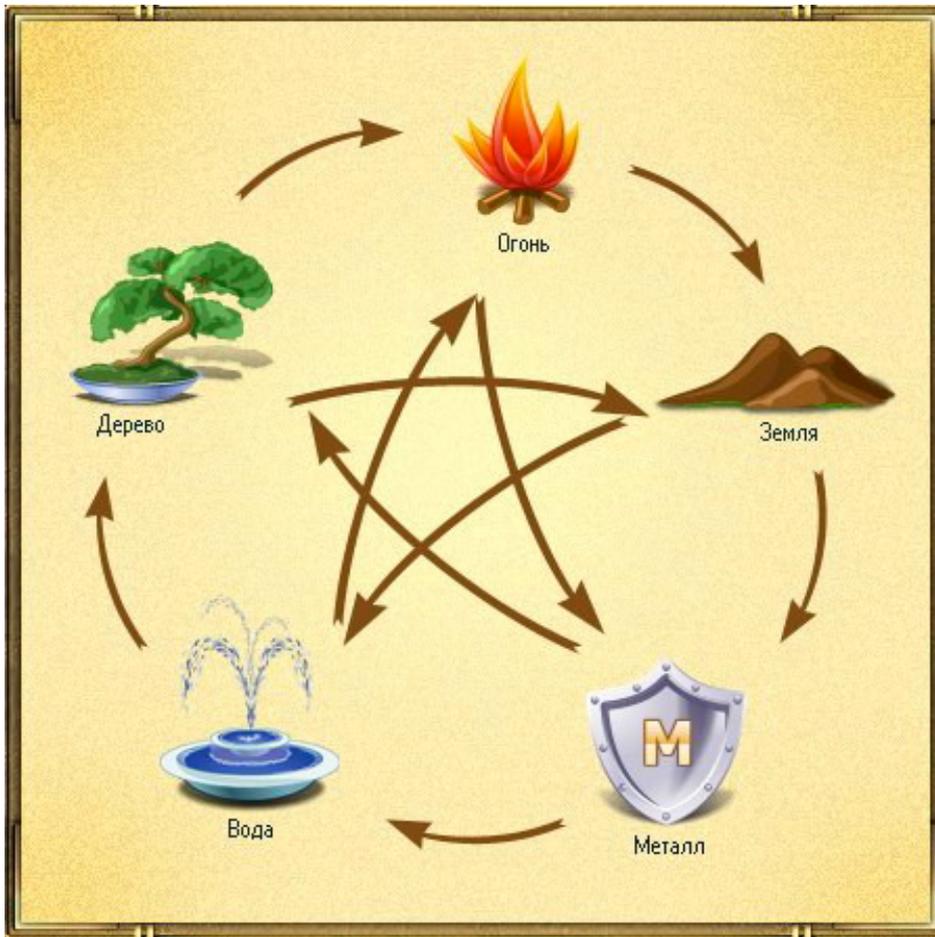

As this theory arose based on the study of Yin-Yang, the relationships between items are represented by two opposites: creative (they mutually reinforce each other) and destructive (they oppress each other).

Creative communication is external and is carried out in a circle of recurrence;
 -Destructive communication is internal, represented by the cycle of a star.
 Because creative communication aimed at the development of self. Destructive communication is oppression, they balance each other, similar to the Yin-Yang.
 Creative connection are as follows:

- "The Water" feeds "The Tree";
- Burning "The Tree" gives birth to "The Fire";
- "The Fire" is the birth "of the Earth";
- "The Earth" gives birth to "The Metal" (from "The Earth" mined metal);
- "The Metal" gives rise to initial state – "The Water".

Destructive relationships are represented by the pentagram, which carries the following explanation:

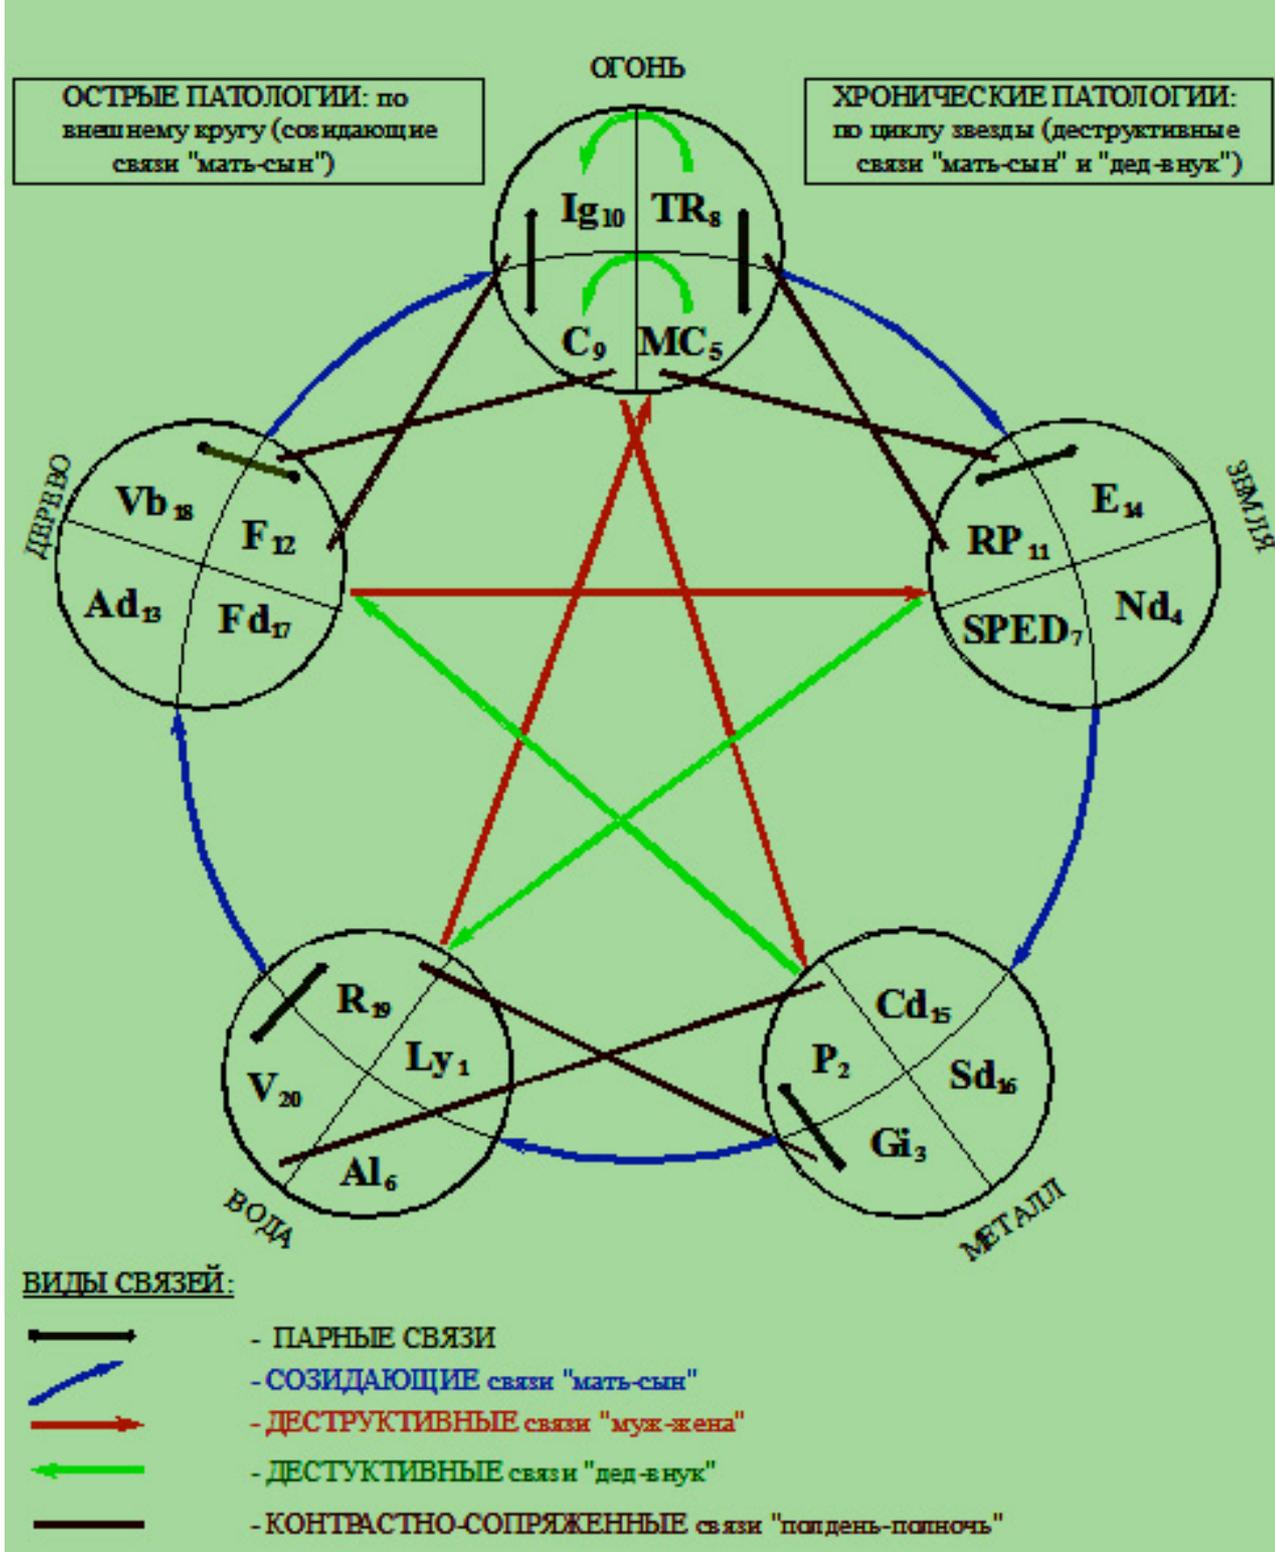

- "The Water" floods and destroys "The Fire"
- "The Fire" affects "The Metal" melts it. Metal loses its strength;
- "The Metal" destroys "The Tree" (by axe, knife);
- "The Tree" roots destroys the "The Earth";
- "The Earth" absorbs "The Water."

The formation of the impact of communication between the authorities established only between the organs of the same group of yin - yin or yang - yang: the liver - spleen, gall bladder - the stomach, etc. According to the severity of clinical manifestations distinguish alternation pronounced influence: "husband - wife" is immunosuppression in chronic hepatitis ; and less pronounced influence of the "grandfather-grandson is the load on the kidneys in immune pathology.

These links are rotated within the pentagram through one connection and only with the same group of elements:

ПЯТЬ ЭЛЕМЕНТОВ У-СИН и СВЯЗИ МЕРИДИАНОВ

Organs YIN ("JAN"):

- liver - pancreas /spleen - the "husband – wife"
- pancreas /spleen - kidneys – "grandfather – grandson"
- kidney – pericardium – the "husband – wife"
- pericardium - heart – "grandfather – grandson"

- heart – lungs - the "husband – wife"

- lungs – liver– "grandfather – grandson"

The YANG organs (FU):

- gall bladder – stomach - the "husband – wife"

- stomach – bladder – "grandfather – grandson"

-urinary bladder – triple heater - the "husband – wife"

- triple heater – small intestine– "grandfather – grandson"

- small intestine – large intestine - the "husband – wife"

- large intestine – gall bladder– "grandfather – grandson"

In medicine, the theory of "U-sin" is used to explain the physiological relationships between the organs of the viscerovisceral reflexes in normal state (in state of the balance of health) as well as the understanding of the regularities in the formation of pathology. The understanding these laws may help in the examination, to diagnose a case, and it is for a successful correction.

№ of the Meridian	Meridian	Pair Meridian	"husband - wife»	«grandfather – grandson»	" noon – midnight "
1.	P (Cd)	GI	C	F	V
2.	GI (Sd)	P	IG	VB	R
3.	E (Nd)	RP	VB	V	MC
4.	RP (SPed)	E	F	R	TR
5.	C	IG	P	MC	VB
6.	IG	C	GI	TR	F
7.	V (Al)	R	TR	E	P
8.	R (Ly)	V	MC	RP	GI
9.	MC	TR	R	C	E
10.	TR	MC	V	IG	RP
11.	VB (Ad)	F	E	GI	C
12.	F (Fd)	VB	RP	P	IG

The concept of Chzhan-Fu

In accordance with this concept all the organs of the human body were classified into three categories:

1. Category Zhang. Lungs, kidneys, liver, heart, spleen, pancreas, i.e. parenchymal organs, whose task was "cleaning", "storage", "reproduction", "redistribution" of energy.
2. Category Fu. The colon, bladder, small intestine, stomach, ie hollow organs. Their task – "digestion", "absorption", "selection", i.e. a kind of "workshop of the body."
3. The category of additional organs took the brain and spinal cord, bone, bone marrow, muscle, the uterus.

The concept Chzhan-Fu is subject to "Great law of double alternation" and the theory of "U-Sin". According to them, the Zhang organs are Yin organs, and the Fu organs are Yang system, Each organ of the "Zhang-Fu" was symbolically related to a specific item.

A Rule Mother-Son

This rule is established by creating a relationship cycle of U-Sin, where the previous element acts as a "mother" who "gives birth" and enhances the subsequent element that acts as a "son." So in relation to the element "The Tree", the element "The Water" acts as a "mother" and the element "The Fire" acts as "son." Using this rule, you receive the possibility of indirect correction of the organs and systems based on a large circle of energy circulation. In accordance with the daily regime of each organ, correspond to their maximum and minimum values of the functional activity, namely:

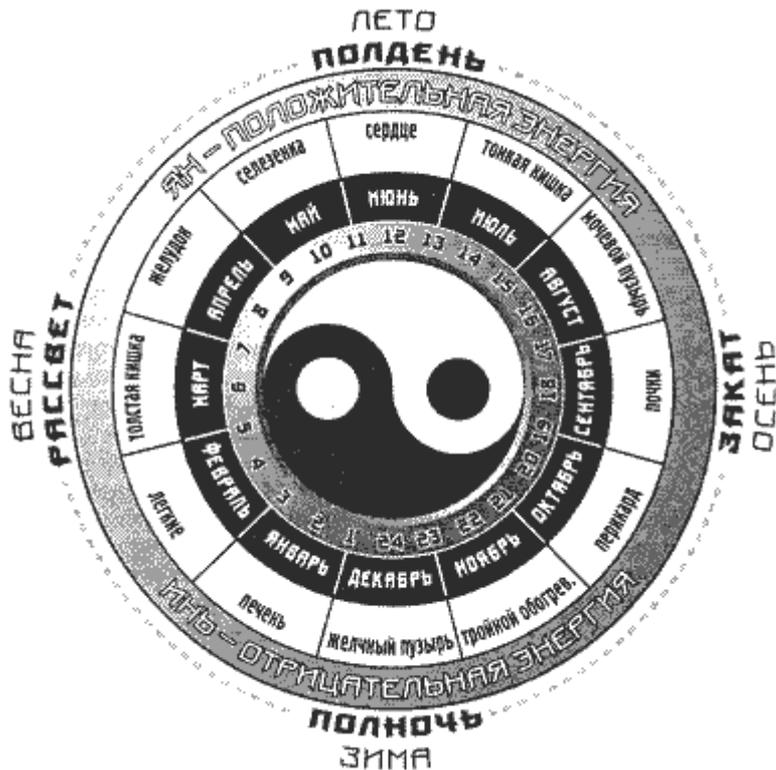

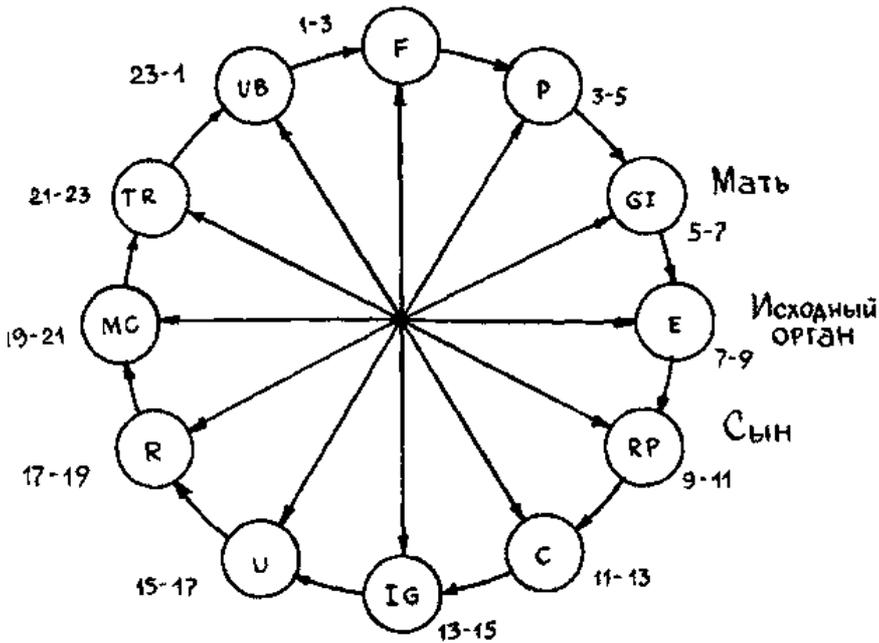

The organs and time

Names	maximum activity time	maximum activity time
Lungs	3-5 hours	15-17 hours
Colon	5-7	17-19
Stomach	7-9	19-21
Pancreas-Spleen	9-11	21-23
Heart	11-13	23-1
Small intestine	13-15	1-3
Bladder	15-17	3-5
Kidneys	17-19	5-7
Arteriovenous, lymphatic system	19-21	7-9
Endocrine system	21-23	9-11
Gallbladder	23-1	11-13
Liver	1-3	13-15

In cases where it is impossible directly to produce a therapeutic effect on the large organ, for certain indications, it is used the rule of "mother-son" for example: when liver disease therapeutic effect on the gallbladder, its name is the "mother" of the liver. With the disease of the stomach a therapeutic effect is produced on the pancreas, it is "son" in relation to the stomach. This approach is confirmed clinically.

The rule of Midday-Midnight

In accordance with a daily circulation of energy, Yang and Yin organs are in contrast relationship. Their functional activities are diametrically opposite, and thanks to them, some clinical symptoms during treatment can be explained. So curing the heart, the patient may experience pain in the gall bladder and vice versa. The same thing can be said about the relationship of the liver with the small intestine, when it hurts impaired activity of the liver. The knowledge of this rule allows you to evaluate the condition of the patient during the treatment and explain the possible side exacerbation, which do not require medical correction.

The knowledge of the diurnal regimes of the bodies helps to orient in the clinical manifestations of the disease and to identify previously the pathological process of organs and systems. In this case, it is necessary to pay attention to the time of occurrence of pain syndromes, to deteriorating health and to other pathological manifestations. The rationality of the describing ancient concepts about the interaction of organs and systems can be demonstrated on the example of possible ways of development of heart disease.

According to the law of large range of energy circulation, the heart gets its energy from the pancreas and gives to the small intestine. The failure of the pancreas leads to a decrease in enzymatic activity, resulting in manifest violation of metabolic processes with the development of autointoxication syndrome, it leads to hypoxic phenomena in the heart muscle. These same phenomena in a deeper form can be found in patients with diabetes.

The heart, in turn, as the "mother" of the small intestine gives him his energy. In cases of chronically proceeding processes in the small intestine, accompanied by its lack of function for several years, eventually it leads to the development of heart pathology due to the additional "pumping" energy from the heart to maintain the compensatory mechanisms of the small intestine.

The heart, as the element "The Fire" is "son" of the element "The Tree" of the liver. As you know, the liver is responsible for fat metabolism, especially cholesterol metabolism. Disorders of cholesterol metabolism leads to the development of atherosclerotic changes in the vascular system of the heart..

According to the destructive relations of the element "Fire" – the heart is contrasted with elements of "Water" - the kidneys and "Metal" - light. It is known that hypertension leads to kidney overload and disruption of compensatory mechanisms of the heart muscle. Lung disease (bronchiectasis, bronchial asthma, chronic nonspecific lung diseases) lead to an overload of the right heart and the subsequent development of cardio-respiratory failure. In turn, the development of cardiac failure manifests itself as the syndrome of cardio-pulmonary insufficiency.

The given relationship of the heart with other organs, directs us to a comprehensive examination of a person to identify the leading mechanisms of the disease with subsequent impact on intimate etiopathogenetic mechanisms.

The table of relationships

	"The Tree"	"The Fire"	"The Earth"	"The Metal"	"The Water"
Body	Liver	Heart	Spleen	Lungs	kidneys
Color	Green	Red	Yellow	White	The black
Planet	Jupiter	Mars	Saturn	Venus	Mercury
Season	Spring	Summer	The end of summer	Autumn	Winter
The development process	increase	climax	Center	decline	peace
Fabric	Muscles	receptacles	Connective tissue	Skin, hair,	Bones
The senses	Eye	tongue	Mouth	Nose	ears
The secret	Tears	Sweat	Saliva	Sputum	Urine
Taste	Sour	Bitter	Sweet	Acute	Salty
Psyche	Anger	Joy	Thoughts, sadness	Yearning	Fear

The concept of Chzhan-Fu

The concept of channels (lines, meridians). This concept is also closely linked to the theories of the "Yin-Yang", "U-Shin", "Chang-fu." According to this concept, each organ has its own meridian, which circulates Chi universal energy and through which he communicates with the surface of the skin and other organs.

Eastern medicine distinguishes two unpaired (not combined) meridian - "front-mid" and "posterior-medial", and 12 major pairs, which are located in the left half of the body, and on the right. 12 core (pair) meridians are composed of two parts - the outer passages, and inner passages, which are directly connected to each other and constitute a single unit.

You need to know the progress of the meridian and their relationships because the bioenergy indicators characterize the condition of the tissue and the areas on the one hand crossed by the meridian, and on the other they can characterize the state of the organ (and its components), of this meridian.

The knowledge of the Meridian system, the sequence of circulation of energy with diurnal rhythms and their relationship will be another opportunity to diagnose better, they will quickly and accurately lead to the starting point of the pathological process and, therefore, to the correct diagnosis and a focused and successful correction without undesirable consequences.

So, headaches, can be due to pathological processes of the stomach, the urogenital organs, the gallbladder and liver.

If the pain is localized in the temporal area and it radiate to the angle of the mandible or the neck, in most cases, the cause is a disease of the stomach. In that case it is necessary to explore the BAT Meridian of the stomach and to produce their biological correction. Headaches that are localized in the fronto-occipital region and radiate along the back, require careful study of the urogenital area.

Local pain and local skin changes (itching, rash, birthmarks, warts), which are localized in the area of the passage of meridians, must inevitably lead your thinking to the main body involved in the pathological process.

The name of the meridians and their international designation:

1	Lungs	P
2	Colon	Gi
3	Stomach	E
4	Spleen - pancreas	RP
5	Hearts	C
6	The small intestine	IG
7	Bladder	V
8	Kidney	R
9	pericardial	MC
10	Three heaters	TR
11	Gallbladder	VB
12	Liver	F
13	Posteroventral median	T (VG)
14	Forward-middle	I (VC)

These meridians were described by the German scientist Voll (1962).

- lymphatic system (Ly)
- neural degeneration (ND),
- Allergy (al),
- vascular-parenchyma-the epithelial degeneration (SPAD),
- articular degeneration (SD),
- connective tissue degeneration (STD) leather
- fatty degeneration (HDD),

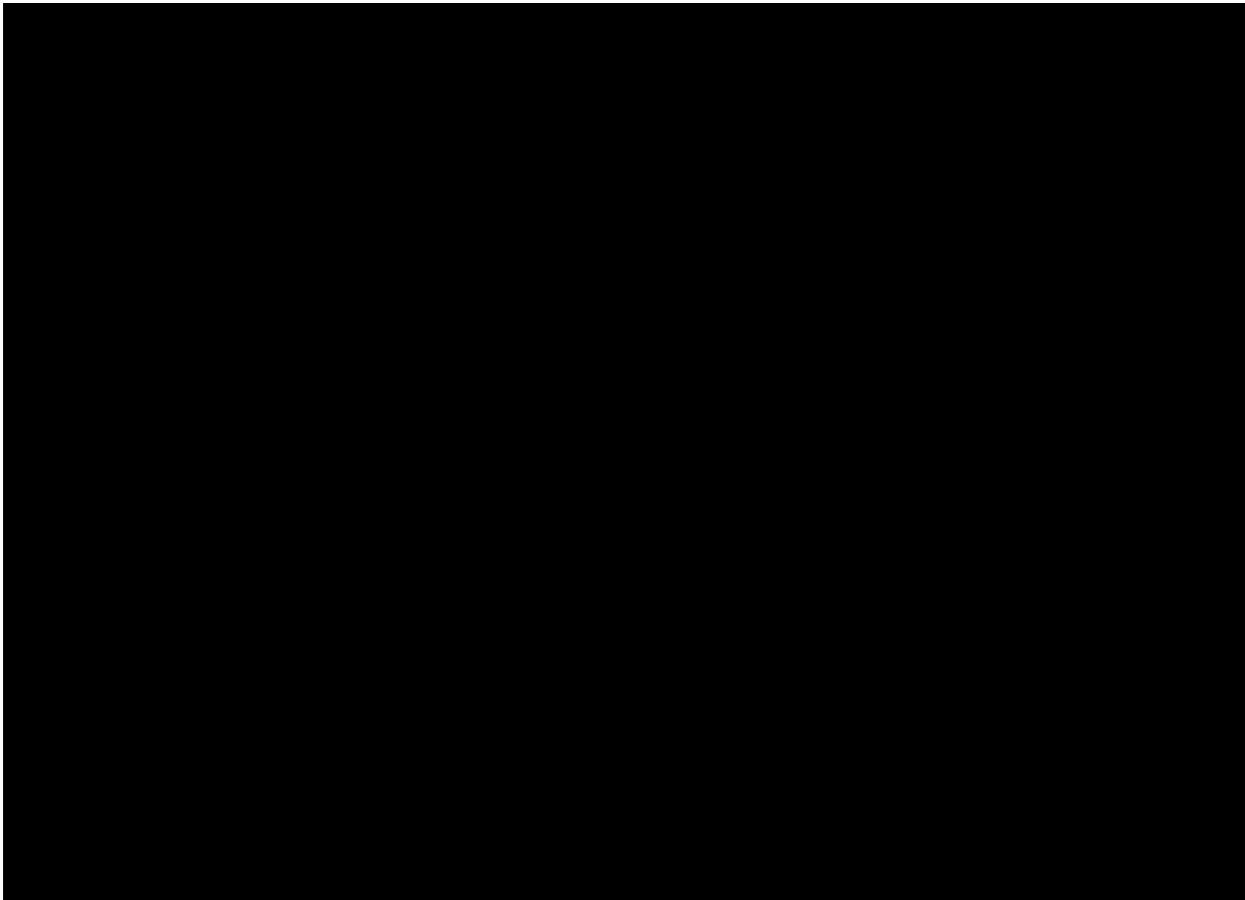

The app

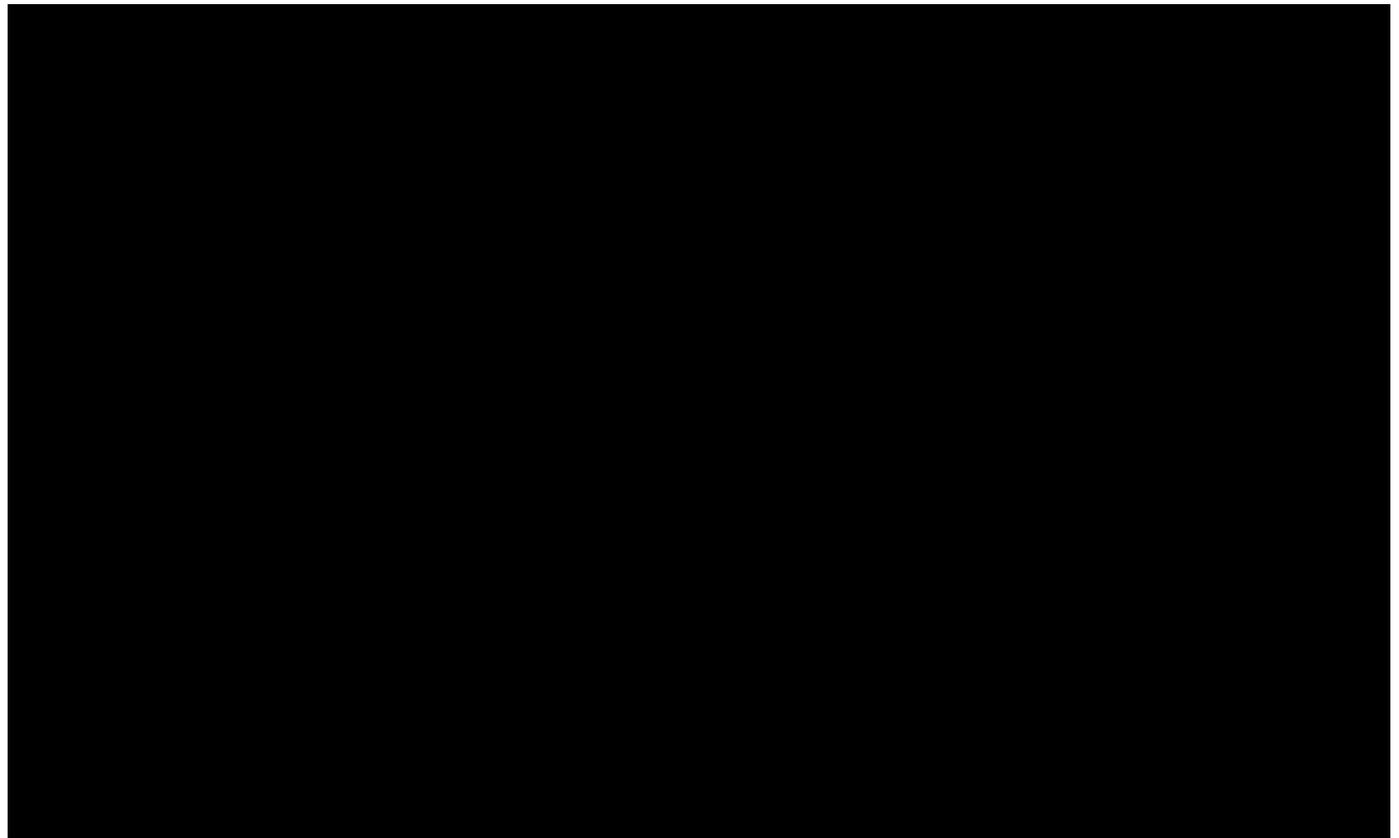

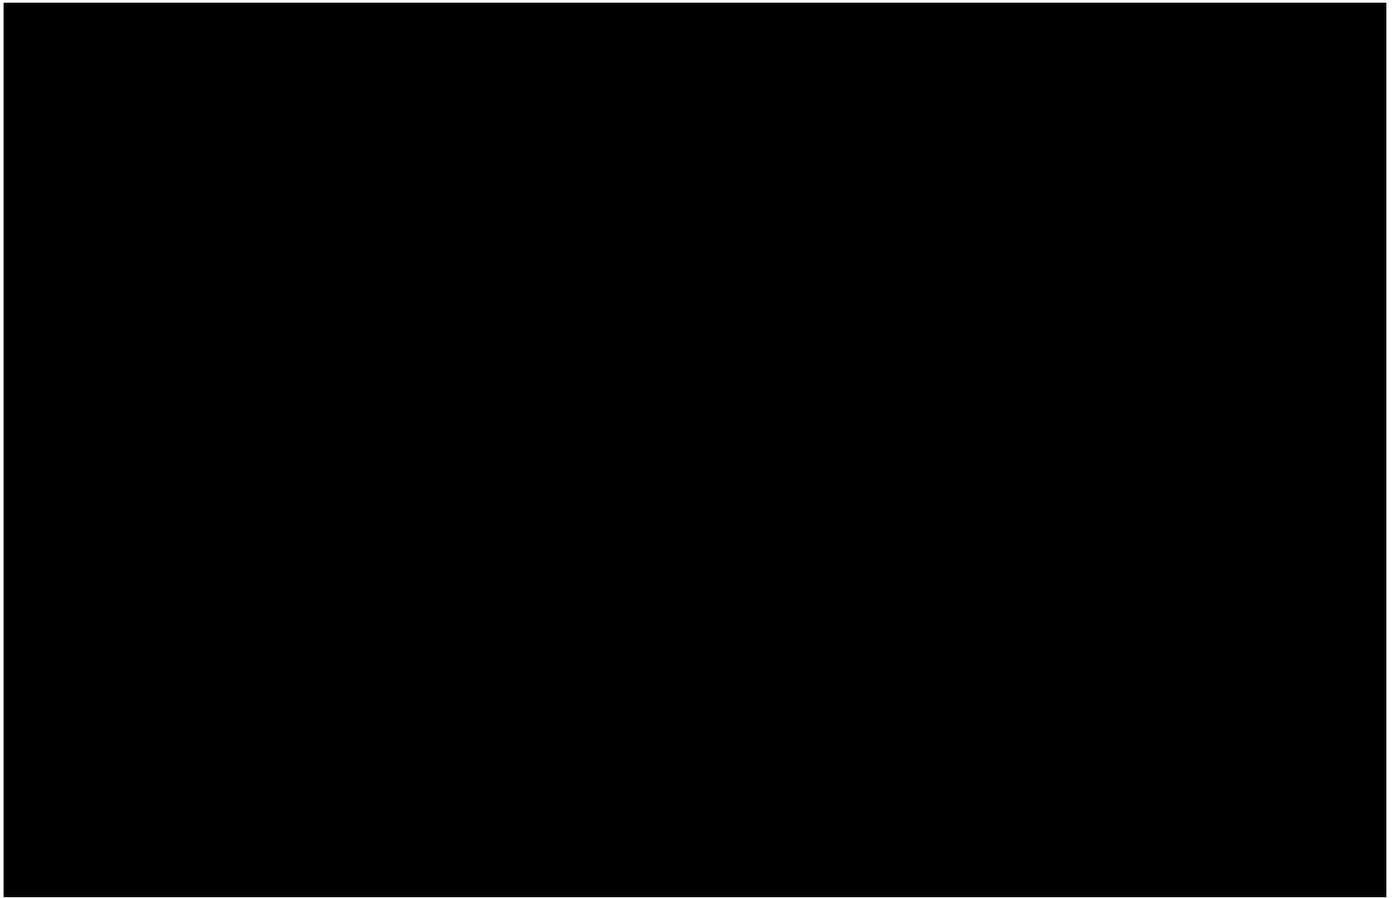

The systematic scheme of connection of the device to a computer

- 1. Remove the flash drive from a set of Express-test.**
- 2. Insert it into the USB port of the computer.**
- 3. Open the flash drive.**
- 4. In the folder "test" run the installation file BiomedisSystems I2.11-64bit.**
- 5. When you install the program, you need to click "Next" until the button "Finish" .**
- 6. By clicking "Finish", you complete the installation of the program.**
- 7. The desktop icon will appear the sight D**

1

Questions and answers

1. «1).Is it possible to set the data about other medicines? And how i can do it? For example, I have been working for a long time and i am familiar with them. Is it possible to pull the medicine from the device, instead of to put it in the cup?

-

We stopped to add data about other medicines in the device, because different companies buy the express diagnosis, where the advertising products causes dissatisfaction. In connection with this situation, we offer the best use of a resonator chamber in which it is possible not only to test, but also to find the most accurate dosing of the product

.2. «I can't set a password on the program!»

- If you want to protect the program with a password, for this you need to go to the left bottom button "Install", then press left button "Admin" and then "Password for user", where you enter your password, and then click the save button. Thus you will keep the password (be sure to write it down or remember). If you want to remove it — do the same thing, only in the "Password for the user" erase the password. Thus the password will be removed.

3. "What is the metal on the electrodes?"

It is brass

4 "What better way is to disinfect plates, especially foot plates? How can i make them dry?"

- As the material of the footplates is brass, it is possible to disinfect them using a cotton sponge or cloth treated with an antiseptic solution, cleaning products and detergents for dishes. Use paper, cloth towels, or plain air drying to make them dry.

5. Can i see parasites only on the listing...?! In addition, why are not they visible on the screen? Then it turns out that if there is no printer, then nothing is clear.. Nevertheless, if I want to send it by mail or transfer to a USB flash drive. How can i do it?!"

- When you open the "reports" and further viewing, after each client, the file "report" will appear on your desktop. You can rename it on the specific name of the client. This is done for comfortable saving to a flash drive and you can send it by e-mail

6. "What do red and blue colors diagnose ?"

Red is tension, inflammation, hyperfunction of the organ, and the blue is hypothyroidism, destructive changes in the body.

7. "What are there the triangles up or down on the device ? And what do mean the numbers on the right, when I watch the state of the client systems of the body?"

- Down triangle (the first column) is the presence or absence of the pathological focus (PFA is the phenomenon of falling arrows): to 4 is not included, from 4 to 10 is the beginning of the disease process, above 11 - is the presence of pathology.

The second triangle upward is the reactivity of the organ..

8 How are the readings taken?

- They are taken by measuring the potential hotspots

9. «"How does DBK meridians work??»

- They work sequentially passing through the 12 main meridians, like a tidal wave of the ocean having respectively a maximum and a minimum.

They work sequentially passing through the 12 main meridians, like a tidal wave of the ocean having respectively a maximum and a minimum The human fluctuations (signals) have electromagnetic nature, They can be measured with using electrodes or inductors , and transmission over electrical wiring on the input of the device for the BRC. Passing in the device specific processing (spatial-temporal, frequency, nonlinear filtering, separation), the oscillations from the output of the device using wires and electrodes (inductors) are returned to the client The electromagnetic field of a person immediately reacts to these signals and adjusted the vibrations send back into the device, etc. Thus, in the process of treatment, people and apparatus form closed circuit of adaptive regulation, resulting in fluctuations again processed and return to the body again. The result is weakened or completely suppressed of the pathological oscillations. The physiological equilibrium amplifies and the dynamic equilibrium (homeostasis). gradually recovers, Thus, when endogenous

DBK parameters of electromagnetic stimulation are determined by the condition of the client, the impact is individualized, which makes this method one of the best managed recovery options..

In the process of the DBK there is the ability to allocate frequency spectra of pathological and physiological oscillations, to fix them and, if necessary, to invert the process. Algorithms and modes are

chosen according to the results of clinical examinations and diagnostic method.

10. "How is it important to do the "Preparation for measurement"?" for every client.

This calibration of the desire, its adjustment to the human. It is advisable to do the "Preparation for measurement" to each person

11. "Why do we need a tick which is situated near to the "Express method", between the field where is written the name of test preparation, "Preparation for measurement"?"?»

This feature needed when working with Voll, where it is used the base of the professional diagnosis. When working with the "Express method" checkbox is recommended to be removed.

12. "Why is it the breakage of the electrodes?"

- There are several reasons: dry skin (moisturize) ; the hair got under the contact; or the USB socket is not work.

13. "Why do not some clients display the parasites in the report?"

- When the number of parasites exceeds allowable indicators (allowable number of 1 gram of tissue), it can lead to the pathological focus or cause illness , then you can see them. When they are less than the amount that causes the pathology then they are not shown, but they will be visible if the body is weak.

14. How i can to know the percent of the parasites?

-
- . Etiology - is a branch of medicine that studies the causes and conditions of disease.
- 2. Etiological factor is the cause without which the disease never develop.
- 3. Risk factors are factors, which increase the likelihood of disease.

% is probability of finding this parasite component in the body (Due to the fact that the cycle of the parasite and its activity are constantly changed. It is recommended to take from the figures above 50%)
The percents ratio of parasites in the body have been obtained on the basis of many years of laboratory research.

15. «"Why does it show so many abnormalities??"»

The testing allows you to prevent the occurrence of the disease in the next 10 years. Showing pathology it reveals a weak link, where etiology (see above) does not have an opportune moment (weakening of the immune system, stress, etc.)

16. "Is the data updated in the Handbook?"

- It is updated when the new versions are updated.16. «Обновляются ли данные в справочнике?»

17. «Сообщите самое главное: чем мы отличаемся от подобной похожей продукции?»

17. "Tell the most important thing: how do we differ from similar products like?"

- Ukrainian manufacturer,
- service,
- legalization,
- availability,

- the simplicity and ease of use,
- for all thinking about health,
- the device itself has 3 basic components: diagnosis, test (selection) correction:
+ 30 000 base ;
- the testing of cosmetics, herbs, dietary supplements, household. chemistry, alcohol, chemical. substances without introducing them into the body, the selection of food, even breast, etc .;
- identification hidden foci of infection;
- production of pre-clinical diagnosis;
- zodiacal food;
- recovery program: harmonization (sedation and stimulation), DBK impact on the meridians (manual and automatic modes);
- control for treatment in dynamics;
- pH-Define cells

18. 18.Is it necessary to have a License, a patent or the existence med diploma for diagnosis?"

No.it is not

The requirement for a physician (valeologist, beautician, massage therapist, nutritionist, etc..) who is not licensed by the health Ministry:

private enterprise

it is not required permits to be placed from the Department of health

on the basis of the diplomas of these specialties it is given a diploma of completion of "Work on DBK" in Ukrainian. and in English. languages with a round seal, which gives the right to use this device for testing the body (eavesdropping) and the issuance of the diagnosis, and recommendations for the prevention and rehabilitation of the client,

at the same time to express yourself in the media (newspapers, television) and to tell about new testing techniques.
